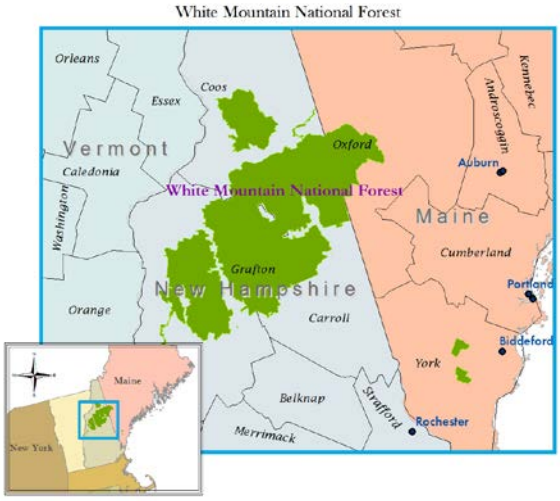
Jobs and Income

Economic Contributions in 2016
At A Glance

White Mountain National Forest



In 2016, the White Mountain National Forest supported:

- An estimated **5,530 jobs** (annual average of part time, full time, temporary and seasonal), and
- Around **$193,948,000** of **labor income** in local communities.

Economics for Planning website (https://www.fs.fed.us/emc/economics/index.shtml)

How do National Forests and Grasslands Contribute to Economies?

National Forests and Grasslands provide multiple benefits to the American people and to local communities. They provide clean air and water, preserve cultural resources, and conserve lands for the enjoyment of present and future generations.

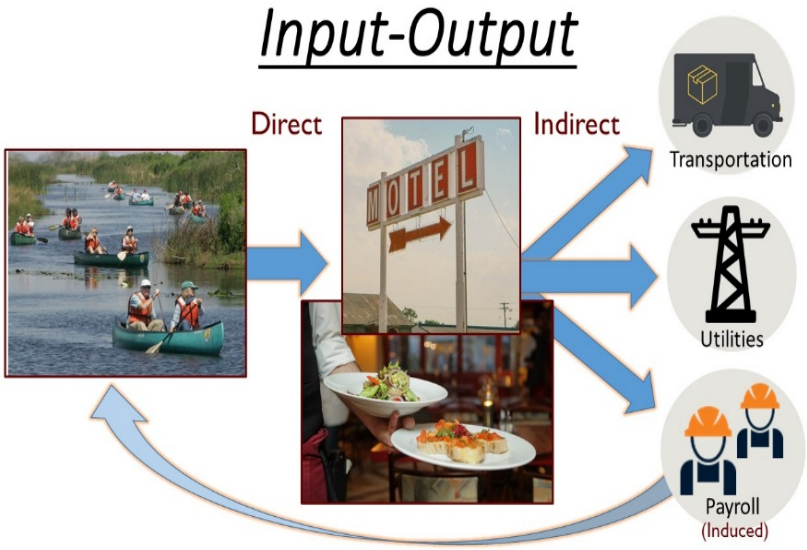
They also support local economies through recreation, timber, energy, minerals, and livestock grazing. In addition, counties with national forests or grasslands receive funds to support schools, road maintenance, and stewardship projects. The Forest Service also invests in such things as the construction and maintenance of infrastructure, environmental restoration, and forest health. In 2016, the sum of these activities on the White Mountain National Forest supported approximately 5,530 local jobs and $193,948,000 in local labor income.

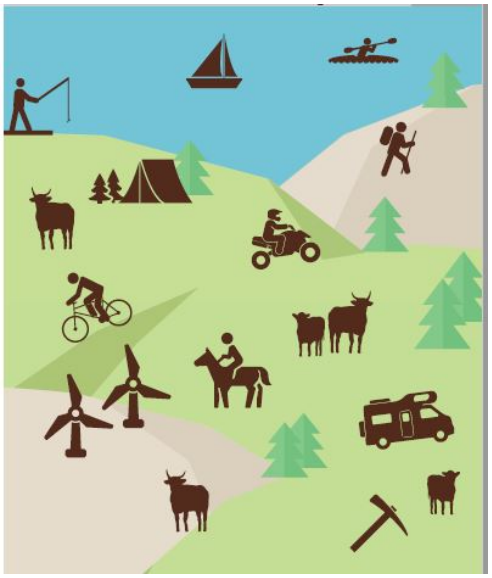
Why Report Jobs and Income?

Residents and local government officials in surrounding communities have interest in how management of the National Forests and Grasslands affects local economies.

Analysis Methods: How a contribution analysis is constructed

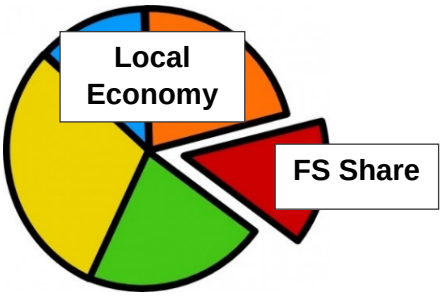
1 A software and data package called IMPLAN (www.implan.com) is used to characterize the structure of the local economy and how the different pieces of the economy interact (an "Input-Output" model).





2 Forest Service data for Program outputs from the White Mountain National Forest is added to the model: recreation (including fish and wildlife related), livestock grazing, forest products, energy, minerals, payments to states, and the Forest Service budget.

3 The model then estimates the economic links between natural resource management on the White Mountain National Forest and local jobs and income.



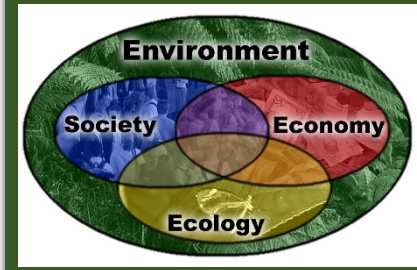
Resource Management Outputs from Forest Service Lands

National Forests and Grasslands are managed for multiple uses. Table 1 shows the Program outputs which were used to estimate the tie between management actions and economic activity in communities around the White Mountain National Forest.

***Table 1*:** **Forest Service Resource Outputs by Program for the White Mountain National Forest during 2016 (for data sources, see page 8).**

Program	Activity	Units of Measure	Output in 2016
Recreation	Wildlife and Fish - Locals	Visits	46,504
		Expenditures (Thousands of $2016)	$693
	Non-residents	Visits	26,158
		Expenditures (Thousands of $2016)	$4,367
	Downhill ski/snowboarding - Locals	Visits	151,655
		Expenditures (Thousands of $2016)	$5,530
	Non-residents	Visits	281,645
		Expenditures (Thousands of $2016)	$54,142
	All Other Rec Activities - Locals	Visits	1,393,938
		Expenditures (Thousands of $2016)	$21,166
	Non-residents	Visits	1,510,100
		Expenditures (Thousands of $2016)	$306,264
Grazing	Cattle, Horses, Sheep, Goats	AUMs	0
Timber	Sawtimber	CCF	7,858
	Fuelwood	CCF	395
	Pulp, Poles, All Other	CCF	7,423
Value of Minerals & Energy Produced	Energy (coal, oil, gas, geothermal)	(Thousands of $2016)	$0
	Minerals	(Thousands of $2016)	$0
Payments to States/Counties	25% fund, Secure Rural Schools, Royalties.	(Thousands of $2016)	$180
	Payments in Lieu of [property] Taxes	(Thousands of $2016)	$217

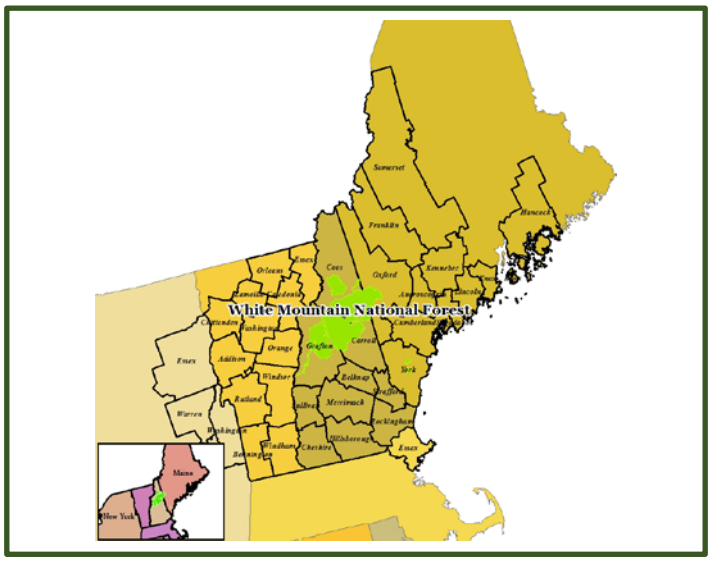
The counties selected to form a National Forest or Grassland's economic area of influence are chosen based on where FS management decisions have a direct effect on economic activity. This group of counties is also referred to as the "study area" or "impact area." The contributions of natural resource management on the National Forests and Grasslands ripple through the local economy, supporting jobs and income in many different sectors of the economy.



The values presented in this report are the best estimates to date, however they are subject to change as new data become available. The estimates for 2016 were last revised in September, 2018.

Economic Area of Influence

Economic areas of influence oftentimes differ by the resource under investigation, surrounding geography, and overall analysis objectives. The estimates in this report are generated for the area around the White Mountain National Forest where direct Forest Service related expenditures occur. Other objectives, i.e. for forest planning, NEPA project analysis, etc. often focus on a different geography. The map below shows where Forest Service related direct expenditures occur, including: recreation and wildlife visitor spending, the location of grazing permit holders, the location of logging and restoration firms, mills processing FS wood products, the counties receiving returns to states funds and payments in lieu of taxes, the location of Forest Service budget expenditures, and the salary spending by Forest Service employees.



Note: To avoid double counting, the results for individual forests and grasslands in an area cannot simply be summed together to get meaningful regional or state contribution results because of overlapping economic areas of influence.

The presentation of data by Program (recreation, timber, etc.) provides a convenient way of displaying the economic contributions of Forest Service activities. It does not mean that the economic contributions can be fully attributed to individual program areas, nor that economic contributions can be compared across programs. Joint cost and joint production complicate programmatic comparisons. For example, an increase in timber harvest would support an increase in local economic contributions from logging and the forest products industry. However, there are associated effects such as fire mitigation, wildlife habitat restoration, recreation access, and so on that share production costs and are not individually captured in the calculation of economic contributions.

Job Contributions by Program

Jobs supported by the National Forests and Grasslands are often in small, rural communities and are therefore an important contribution to economic and social sustainability. Employment is the estimate of average annual full-time, part-time, temporary, and seasonal jobs. In 2016, the White Mountain National Forest supported an estimated 5,530 jobs in the local area. Direct job contributions come from economic activity associated with a Forest Service Program. Secondary job contributions are the ripples of economic activity stimulated by the direct economic activity. Total job contributions are the sum of direct and secondary contributions.

Table 2: **Direct and Total jobs supported by the White Mountain National Forest in 2016.**

Program	Direct Jobs (Avg Annual)	Total Jobs (Avg Annual)
Recreation by Local Visitors	250	360
Recreation by Non-Local Visitors	3,380	4,820
Minerals and Energy	0	0
Forest Products	40	80
Livestock Grazing	0	0
FS Resource Mgt Investments	190	260
Payments to States/Counties	10	10

The estimates for Recreation (including wildlife related), Minerals & Energy, Forest Products, and Livestock Grazing estimates include the jobs supported by these programs in the private sector. Non-local recreation visitors bring new money into the economy. Local recreationists spend money that is already counted in the economic statistics for the area so they are tracked independently.

Forest Service Resource Management Investments capture the spending of the National Forest or Grassland's budget on such things as infrastructure construction and maintenance, ecosystem restoration, fuels treatments, salaries, etc.

The Payments to States/Counties estimates the jobs supported by local government investment in such things as roads and schools via funding from programs like the 25% Fund, Payments in Lieu of Taxes and minerals royalties.

NOTE: What is a "job"? **One "job" does not always equal one person**. The job estimates reported here represent the average annual SUM of portions of jobs - part time, full time, seasonal and temporary – that are supported by management of the White Mountain National Forest.

Keeping the Focus Local

Labor Income is directly associated with local jobs and business owners. Other measures of income such as Household Income and Total Income include things like investments, rents, and transfer payments that are not tied to Forest Service management decisions so they are not reported here.

As direct and secondary contributions ripple through the economy, Labor Income is supported in a wide variety of sectors not directly affected by resource management decisions.

Labor Income Contributions by Major Program

Labor income is the value of wages, salaries and benefits for wage earners plus income to local business owners. In 2016 White Mountain National Forest contributed an estimated $193,948,000 in labor income to the local area, with 88% going to wages and benefits for local wage earners and 12% going to local business proprietors and partnerships.

***Table 3*: Direct and Total Labor Income supported by the White Mountain National Forest in 2016.**

Program	Direct Labor Income (Annual, 1,000 $2016)	Total Labor Income (Annual, 1,000 $2016)
Recreation by Local Visitors	$7,405	$12,289
Recreation by Non-Local Visitors	$97,289	$164,810
Minerals and Energy	$0	$0
Forest Products	$2,014	$3,690
Livestock Grazing	$0	$0
FS Resource Mgt Investments	$9,364	$12,684
Payments to States/Counties	$334	$475

Job and Labor Income Contributions by Major Economic Sector

Jobs and labor income supported by the National Forests and Grasslands are spread across many local economic sectors. Note that sectors that have the highest employment may not generate the highest labor income and vice versa. Jobs and income are important, but there is a range of other benefits from the national forests and grasslands.

Table 4: **Total Jobs and Labor Income supported by the White Mountain National Forest in 2016 with local economic area of influence totals for context.**

Major Economic Sector	FS Supported Jobs (Avg. annual)	FS Supported Labor Income (1,000 $2016)	Area of Influence Jobs (Avg. annual)	Area of Influence Labor Income (1,000 $2016)
Total	5,530	$193,948	2,470,124	$132,583,360
FS Percent of Area of Influence	0.2%	0.1%		
Accommodation & Food Servs	2,700	$74,771	197,653	$5,073,825
Admin, Waste Mgt & Rem Servs	160	$6,268	126,562	$5,245,259
Agriculture	60	$1,909	44,523	$892,322
Arts, Entertainment, and Rec	440	$9,907	65,396	$1,436,576
Construction	40	$2,385	157,321	$8,980,094
Private Educational Services	140	$4,344	70,619	$2,972,427
Finance & Insurance	90	$6,616	105,554	$7,863,099
Health Care & Social Assistance	210	$12,621	326,975	$19,006,141
Information	50	$3,550	38,320	$3,033,049
Local, State, & National Gov't	180	$9,537	269,522	$19,179,820
Manufacturing	40	$2,386	195,214	$15,649,625
Mining	10	$102	4,819	$151,457
Mgt of Companies	40	$3,784	26,221	$2,719,240
Other Services	140	$7,093	145,569	$6,331,603
Prof, Scientific, & Tech Services	160	$9,950	182,564	$13,212,841
Real Estate & Rental & Leasing	140	$2,617	103,282	$1,926,590
Retail Trade	710	$21,290	52,037	$2,272,999
Transportation & Warehousing	100	$4,371	275,124	$9,270,629
Utilities	10	$1,129	6,199	$791,118
Wholesale Trade	110	$9,318	76,651	$6,574,645
