Jobs and Income

Economic Contributions in 2016
At A Glance

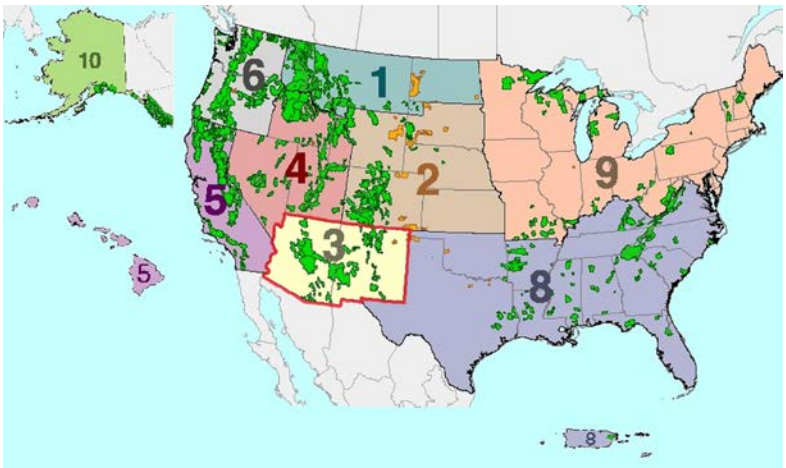
Southwestern Region 3

In 2016, the Southwestern Region 3 supported:

- An estimated **27,580 jobs** (annual average of part time, full time, temporary and seasonal), and
- Around **$1,084,281,000** of **labor income** in local communities.

For More Information:

Economics for Planning website (https://www.fs.fed.us/emc/economics/index.shtml)



How do the National Forests and Grasslands Contribute to Economies?

National Forests and Grasslands provide multiple benefits to the American people and to local communities. They provide clean air and water, preserve cultural resources, and conserve lands for the enjoyment of present and future generations.

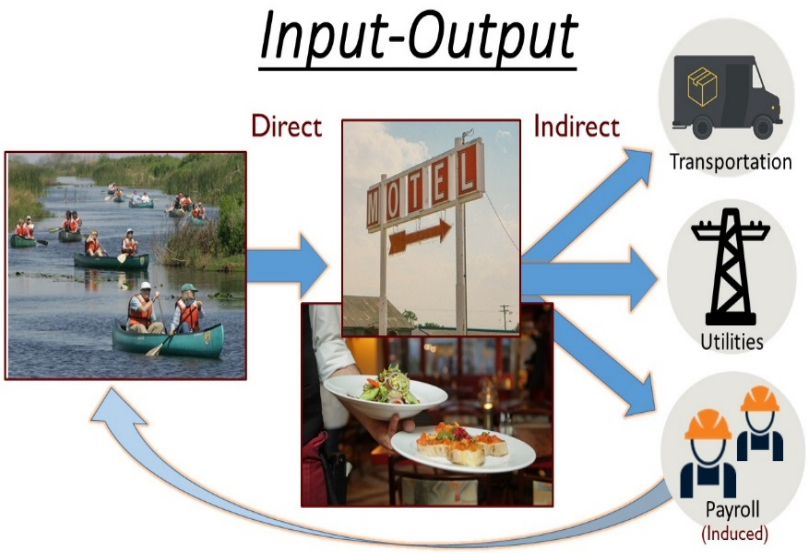
They also support local economies through recreation, timber, energy, minerals, and livestock grazing. In addition, counties with national forests or grasslands receive funds to support schools, road maintenance, and stewardship projects. The Forest Service also invests in such things as the construction and maintenance of infrastructure, environmental restoration, and forest health. In 2016, the sum of these activities on Forest Service lands in the Southwestern Region 3 supported approximately 27,580 local jobs and $1,084,281,000 in local labor income.

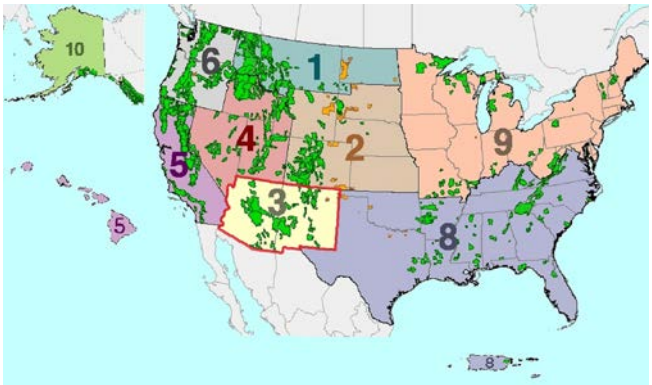
Why Report Jobs and Income?

Residents and local government officials in surrounding communities have interest in how management of the National Forests and Grasslands affect local economies.

Analysis Methods: How a contribution analysis is constructed

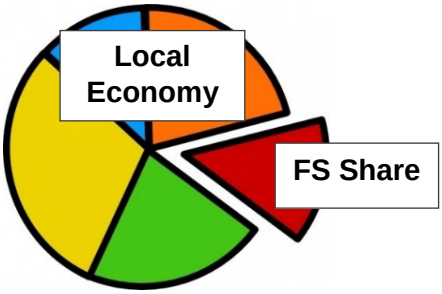
1 A software and data package called IMPLAN (www.implan.com) is used to characterize the structure of the local economy and how the different pieces of the economy interact (an "Input-Output" model).





2 Forest Service data for Program outputs from the Southwestern Region 3 is added to the model: recreation (including fish and wildlife related), livestock grazing, forest products, energy, minerals, payments to states, and National Forest and Grassland budgets.

3 A model is built from this data which estimates the economic links between Forest Service natural resource management on Forest Service lands in the Southwestern Region 3 and local jobs and income.



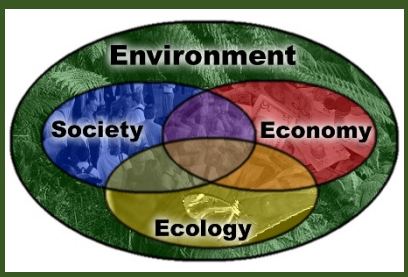
Resource Management Outputs from Forest Service Lands

National Forests and Grasslands are managed for multiple uses. Table 1 shows the Program outputs which were used to estimate the tie between management actions and economic activity in communities around Forest Service lands in the Southwestern Region 3.

Table 1: **Forest Service Resource Outputs by Program in the Southwestern Region 3 during 2016 (for data sources, see page 8).**

Program	Activity	Units of Measure	Output in 2016
Recreation	Wildlife and Fish - Locals	Visits	843,121
		Expenditures (Thousands of $2016)	$22,976
	Non-residents	Visits	493,179
		Expenditures (Thousands of $2016)	$60,955
	Downhill ski/snowboarding - Locals	Visits	255,883
		Expenditures (Thousands of $2016)	$6,831
	Non-residents	Visits	296,647
		Expenditures (Thousands of $2016)	$51,900
	All Other Rec Activities - Locals	Visits	9,168,002
		Expenditures (Thousands of $2016)	$126,554
	Non-residents	Visits	3,533,168
		Expenditures (Thousands of $2016)	$534,340
Grazing	Cattle, Horses, Sheep, Goats	AUMs	1,741,949
Timber	Sawtimber	CCF	96,240
	Fuelwood	CCF	100,477
	Pulp, Poles, All Other	CCF	24,598
Value of Minerals & Energy Produced	Energy (coal, oil, gas, geothermal)	(Thousands of $2016)	$108,758
	Minerals	(Thousands of $2016)	$287,554
Payments to States & Counties	25% fund, Secure Rural Schools, Royalties	(Thousands of $2016)	$15,340
	Payments in Lieu of Taxes	(Thousands of $2016)	$27,769

The counties selected to form a National Forest or Grassland's economic area of influence are chosen based on where FS management decisions have a direct effect on economic activity. This group of counties is also referred to as the "study area" or "impact area." The contributions of natural resource management on the National Forests and Grasslands ripple through the local economy, supporting jobs and income in many different sectors of the economy.

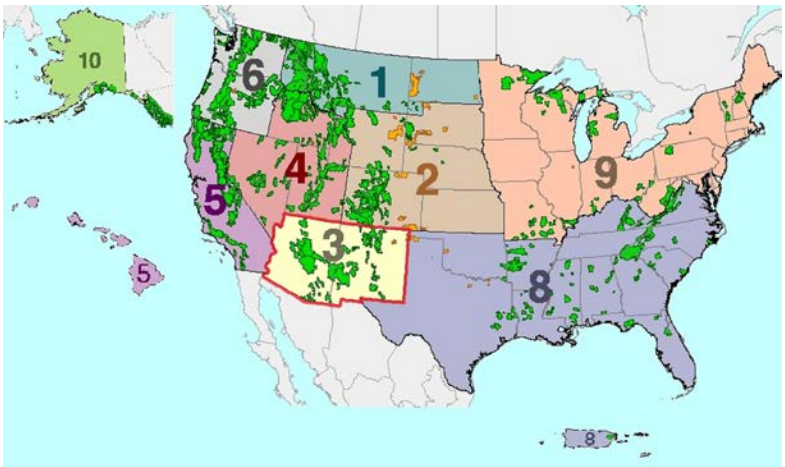


The values presented in this report are the best estimates to date, however they are subject to change as new data become available. The estimates for 2016 were last revised in June, 2018.

Economic Area of Influence

Economic areas of influence oftentimes differ by the resource under investigation, surrounding geography, and overall analysis objectives.The estimates in this report are generated for the areas around Forest Service lands in the Southwestern Region 3 where direct Forest Service related expenditures occur. Other objectives, i.e. for forest planning, NEPA project analysis, etc. often focus on a different geography. On the map below, the area outlined in red shows where Forest Service related direct expenditures occur in the Southwestern Region 3, including: recreation and wildlife visitor spending, the location of grazing permit holders, the location of logging and restoration firms, the location of mills processing FS wood products, the counties receiving returns to states funds and payments in lieu of taxes, the location of Forest Service budget expenditures, and the salary spending by Forest Service employees.

To avoid double counting, the results for individual forests and grasslands were not simply summed together to get FS Region or national contribution results.



Note: The presentation of data by Program (recreation, timber, etc.) provides a convenient way of displaying the economic contributions of Forest Service activities. It does not mean that the economic contributions can be fully attributed to individual program areas, nor that economic contributions can be compared across programs. Joint cost and joint production complicate programmatic comparisons. For example, an increase in timber harvest would support an increase in local economic contributions from logging and the forest products industry. However, there are associated effects such as fire mitigation, wildlife habitat restoration, recreation access, and so on that share production costs and are not individually captured in the calculation of economic contributions.

Job Contributions by Program

Jobs supported by the National Forests and Grasslands are often in small, rural communities and are therefore an important contribution to economic and social sustainability. Employment is the estimate of average annual full-time, part-time, temporary, and seasonal jobs. In 2016, the Southwestern Region 3 supported an estimated 27,580 jobs in the local area. Direct job contributions come from economic activity associated with a Forest Service Program. Secondary job contributions are the ripples of economic activity stimulated by the direct economic activity. Total job contributions are the sum of direct and secondary contributions.

Table 2: **Direct and Total jobs supported by the Southwestern Region 3 in 2016.**

Program	Direct Jobs (Avg Annual)	Total Jobs (Avg Annual)
Recreation by Local Visitors	1,510	2,190
Recreation by Non-Local Visitors	6,300	9,180
Minerals and Energy	860	1,820
Forest Products	990	1,900
Livestock Grazing	3,100	5,140
FS Resource Mgt Investments	3,910	6,270
Payments to States/Counties	690	1,080

The estimates for Recreation (including wildlife related), Minerals & Energy, Forest Products, and Livestock Grazing include the jobs supported by these programs in the private sector. Non-local recreation visitors bring new money into the economy. Local recreationists spend money that is already counted in the economic statistics for the area so they are tracked independently.

Forest Service Resource Management Investments capture the spending of National Forest or Grassland budgets on such things as infrastructure construction and maintenance, ecosystem restoration, fuels treatments, salaries, etc.

The Payments to States/Counties estimates the jobs supported by local government investment in such things as roads and schools via funding from programs like the 25% Fund, Payments in Lieu of Taxes and minerals royalties.

NOTE: What is a "job"? **One "job" does not always equal one person**. The job estimates reported here represent the average annual SUM of portions of jobs - part time, full time, seasonal and temporary – that are supported by management of Forest Service lands in the Southwestern Region 3.

Keeping the Focus Local

Labor Income is directly associated with local jobs and business owners. Other measures of income such as Household Income and Total Income include things like investments, rents, and transfer payments that are not tied to Forest Service management decisions so they are not reported here.

As direct and secondary contributions ripple through the economy, Labor Income is supported in a wide variety of sectors not directly affected by resource management decisions.

Labor Income Contributions by Major Program

Labor income is the value of wages, salaries and benefits for wage earners plus income to local business owners. In 2016 Southwestern Region 3 contributed an estimated $1,084,281,000 in labor income to the local area, with 87% going to wages and benefits for local wage earners and 13% going to local business proprietors and partnerships.

***Table 3*: Direct and Total Labor Income supported by the Southwestern Region 3 in 2016.**

Program	Direct Labor Income (Annual 1,000 $2016)	Total Labor Income (Annual 1,000 $2016)
Recreation by Local Visitors	$41,129	$71,510
Recreation by Non-Local Visitors	$167,652	$295,580
Minerals and Energy	$71,668	$120,872
Forest Products	$39,686	$91,057
Livestock Grazing	$12,230	$82,047
FS Resource Mgt Investments	$263,130	$366,154
Payments to States/Counties	$39,720	$57,061

Job and Labor Income Contributions by Major Economic Sector

Jobs and labor income supported by the National Forests and Grasslands are spread across many local economic sectors. Note that sectors that have the highest employment may not generate the highest labor income and vice versa. Jobs and income are important, but there is an enormous range of other benefits from the national forests and grasslands.

Table 4: **Total Jobs and Labor Income supported by the Southwestern Region 3 in 2016 with local economic area of influence totals for context.**

Major Economic Sector	FS Supported Jobs (Avg. annual)	FS Supported Labor Income (1,000 $2016)	Area of Influence Jobs (Avg. annual)	Area of Influence Labor Income (1,000 $2016)
Total	27,580	$1,084,281	4,698,414	$236,129,750
FS Percent of Area of Influence	0.6%	0.5%		
Accommodation & Food Servs	6,420	$155,146	386,854	$9,078,977
Admin, Waste Mgt & Rem Servs	920	$34,175	356,398	$13,664,963
Agriculture	5,170	$74,040	85,000	$2,723,714
Arts, Entertainment, and Rec	940	$20,271	102,677	$2,519,887
Construction	230	$11,116	254,215	$11,795,553
Educational Services	350	$12,128	91,339	$3,388,508
Finance & Insurance	680	$42,290	261,016	$15,447,193
Health Care & Social Assistance	1,180	$68,086	529,142	$29,364,841
Information	180	$13,079	74,652	$5,318,969
Local, State, & National Gov't	3,330	$262,238	631,406	$43,719,892
Manufacturing	450	$17,504	207,425	$15,903,910
Mining	980	$81,633	50,161	$3,865,845
Mgt of Companies	150	$11,990	42,497	$3,470,089
Other Services	780	$35,518	268,671	$11,092,280
Prof, Scientific, & Tech Services	1,400	$61,972	336,601	$22,900,843
Real Estate & Rental & Leasing	760	$18,476	245,804	$5,680,231
Retail Trade	2,380	$76,270	137,119	$7,405,578
Transportation & Warehousing	610	$33,128	481,981	$16,221,949
Utilities	50	$6,146	17,506	$2,225,250
Wholesale Trade	630	$49,076	137,950	$10,341,279
