## **Information about Forest Service Sensitive Species, and Key to Acronyms and Abbreviations Used in the Sensitive Species List**

**1 December, 2004**

These are currently designated sensitive species in the nine Forest Service regions, that are NOT listed or proposed species under the ESA. Each respective Region maintains the the definitive, current, list of designated sensitive species in that Region.

Taxa nomenclature has been verified by NatureServe, July 2004.

All ranks have been verified by NatureServe, July 2004.

**Typos and corrections have been made to the 1 September 2004 file.**

Species have been designated by each Regional Forester because of a concern for viability.

Designation may be due to concerns at both rangewide and planning area scales, OR due to concerns at only a planning area scale.

Species are NOT necessarily a designated sensitive species on every National Forest in each Region where it is designated.

All parties should use this information to coordinate and implement species and habitat conservation actions across regions, states and forests, and to develop and implement appropriate conservation strategies for species, habitats and ecosystems; both with and without partnerships.

### **REGIONS - Forest Service Regions**

R1 Northern Region, Regional Office (RO) in Missoula MT

R2 Rocky Mountain Region, RO in Denver CO

R3 Southwestern Region, RO in Albuquerque NM

R4 Intermountain Region, RO in Ogden UT

R5 Pacific Southwest Region, RO in Vallejo CA

R6 Northwest Region, RO in Portland OR

R8 Southern Region, RO in Atlanta GA

R9 Eastern Region, RO in Milwaukee WI

R1 Alaska Region, RO in Juneau AK

**NATURESERVE SCIENTIFIC NAME** - scientific name used by NatureServe & State Natural Heritage Programs; <http://www.natureserve.org/explorer/>

**NATURESERVE COMMON NAME** - common name used by NatureServe

**MAJOR GROUP** - Plant, Invertebrate, Vertebrate

**SUBGROUP** - Bryophyte, Conifer, Fern/Fern Ally, Fungi, Lichen

Arachnid, Crustacean, Insect, Mollusc, Other Invertebrate

Amphibian, Bird, Fish, Mammal, Reptile

**NS G RANK - NatureServe global conservation status rank of taxon; <http://www.natureserve.org/explorer/methods.htm>**

G1 = critically imperiled, at very high risk of extinction due to extreme rarity, very steep declines, or other factors

G2 = imperiled, at high risk of extinction due to very restricted range, very few populations, recent and widespread declines or other factors

G3 = vulnerable, at moderate risk of extinction due to restricted range, relatively few populations, recent and widespread declines, or other factors

G4 = apparently secure, uncommon but not rare; some cause for long-term concern due to declines or other factors

G5 = secure, widespread and abundant

G#G# = a numeric range rank, used to indicate the range of uncertainty in the status of a species or community

GH = possibly extinct, missing; known from only historical occurrences but still some hope of rediscovery

GU = unrankable, due to lack of information or due to substantially conflicting information about status or trends

GNR = unranked; Global rank not yet assessed

GNA = not applicable; a conservation status rank is not applicable because the species is not a suitable target for conservation activities

Modifiers:

G#Q = questionable taxonomy, taxonomic distinctiveness at the current level is questionable

G#? = denotes inexact numeric range

**NS T RANK - NatureServe conservation status rank of infraspecific taxon; same ranks used for global rank are applied to infraspecific taxa (T)**

**NS U.S. N RANK - NatureServe conservation status rank of taxon at only U.S. national scale; ranks used for global rank applied at national scale (N)**

**U.S. ESA C - taxon is a designated Candidate species for listing under the U.S. Endangered Species Act**

C - designated by the FWS as a Candidate species

FC - designated by the NMFS as a Candidate species
