

**TEMPLEMAN HFRA EA
ERRATA SHEETS
April 17, 2008**

The following will be incorporated into the final document for implementation:

EA Chapter 2, Section 2.3.2, Connected Actions

Connected actions #1 (future salvage) and #3 (herbicide use for noxious weeds) described on page 15 are deleted activities.

EA Chapter 2, Section 2.4, Design Criteria and Mitigations

Add Criteria #9 as follows:

Units 3 and 4 currently exceed R1 Soil Standards. In order to show a net improvement in the soil quality conditions for these units, unclassified roads #940-UA and #940-UB in Unit 3 and skid trails "A" and "B" located off the end of FR 397C in Unit 4 will be obliterated following use. An updated project area map is attached to this errata that displays the location of these roads/trails. Included below are the soil scientist calculations for acres of improvement that will be achieved following the obliterations:

Project File Document #SOIL-26

Title: Calculations of Roads and Skid Trails to be Obliterated

Brief description of how information was used:

Excel spreadsheet that aids in the calculation of mileage and acres of roads proposed for obliteration.

| Unit | Label | Miles | Feet | Square Feet* | Acres |
|--------------|--------------------|--------------|---------------|---------------------|--------------|
| 3 | 940-UA | 0.11 | 580.8 | 17424 | 0.4 |
| | 940-UB | 0.74 | 3907.2 | 117216 | 2.7 |
| Subtotal | | 0.85 | 4488 | 134640 | 3.1 |
| 4 | 397C-skidtrail "A" | 0.46 | 2428.8 | 48576 | 1.1 |
| | 397C-skidtrail "B" | 0.21 | 1108.8 | 22176 | 0.5 |
| Subtotal | | 0.67 | 3537.6 | 70752 | 1.6 |
| Total | | 1.52 | 8025.6 | 205392 | 4.7 |

*assumes a 30 ft. road width (including cut/fill) for the unclassified roads in Units 3 and 20 ft. for skid roads in Unit 4.

EA and EA Appendices references to culvert or ditch relief pipe "replacement" activities

On EA pages i, 15, 28 (paragraph 1), delete the word "replacements". There are no culvert or ditch relief pipe replacement activities that will take place under the selected alternative.

On EA Appendix A, pages Soil-20, delete the word "replacement".

**TEMPLEMAN HFRA EA
ERRATA SHEETS
April 17, 2008**

On EA Appendix C, page 16 (paragraph 2), replace the word "culvert" with "ditch relief pipe" and replace the word "replacement" with "cleaning".

On EA Appendix C, page 35 (paragraph 3) and page 39 (paragraph 3), replace the word "culvert" with "ditch relief pipe" and replace the word "replacement" with "cleaning".

On EA Appendix C, page 42 (paragraph 1), replace the word "culvert" with "ditch relief pipe".

On EA Appendix C, page 45 (last paragraph), page 53 (paragraph 3), page 56 (paragraph 2), page 57 (paragraph 6) replace "culvert replacements" with "ditch relief pipe cleaning".

On EA Appendix C, page 71 (last paragraph), replace "culverts" with "ditch relief pipes" and delete "or upgrading".

On EA Appendix C, page 79 (paragraph 1) and page 82 (last paragraph), replace "culvert replacements" with "ditch relief pipe cleaning".

On EA Appendix C, page 81 (paragraph 2), replace "culvert" with "ditch relief pipe" and delete "or upgrading".

On EA page 97 (paragraphs 8, 9 and last), replace "culvert" with "pipe" and; and delete "and replacement" in paragraph 8.

On EA page 24 (paragraph 7), replace the phrase "wetlands in the mid-section of the project area" with "wetlands located to the east of Units 4, 5 and 6 that are in the project area but outside treatment areas".

On EA page 28 (paragraph 2), replace the phrase "extensive below lying wetland complex. " with "extensive wetland complex located outside the treatment areas but within the project area."

The T&E list was updated on April 9, 2008 (Ref. No.1-9-08-SP-0067 105.0100), which included a delisting of the gray wolf, the slender moonwort has been removed from candidate status and revised critical habitat for Canada Lynx has been proposed. There were no changes to the list that affected fish species. The Templeman project is consistent with the new listing and there will be no change to the wildlife or botany effects analysis completed for this project (pers.comm. between the project leader, wildlife biologist and botanist on April 16, 2008). The following determination is added to the wildlife biological assessment, EA Appendix C, page 19:

The Templeman project area lies outside established lynx analysis, is below 3,400 feet in elevation and is not part of a linkage corridor that is necessary to maintain connectivity between lynx habitat. As a result designation of critical lynx habitat will have no effect on this species or its habitat or alter the analysis of effects discussed in the Templeman Biological Assessment.

Due to the absence of recent documentation, high road density and human disturbance and the absence of activities that would affect wolf security or alter prey densities, implementation of the Templeman project would have no effect on the gray wolf and de-listing this species will not alter the analysis of effects discussed in the Templeman Biological Assessment.
