

Finally, I have a minute to give you some numbers. I apologize for taking so long and not giving you a fancy report. I've just been juggling too many balls lately.

I have solicited input from our major partners but have not received any info from them either, but here's what we've done:

| | | |
|---|-----------|-------------|
| White bark pine restoration | 30 acres | |
| Simmons road closure enhancement | 7 acres | |
| Beetlemania closure enhancement | 3 acres | |
| Wildlife prescribed burning | | 512 acres - |
| partner w/ Rocky Mountain Elk Foundation (\$5,000) | | |
| Noxious weed spraying | | 72 acres - |
| partner w/ Backcountry horsemen and Shoshone county (approx. \$5,000) | | |
| Heller Creek instream restoration | 115 sites | |
| contracted, 22 sites complete - partner w/ Crown Pacific International, Coeur d'Alene Tribe | | |

and AVISTA (total contribution approx. \$7,000), and funds from Northern Region Partnership Grant

(\$17,000)

| | | |
|--|------------|-------|
| North Fk St. Joe River riparian planting | 5 acres | |
| Turner Dam Removal (fish block) | | 1 dam |
| Road Obliteration miles | | 4 |
| Culvert Replacements culverts (fish blocks) | | 3 |
| Bear/Bussel vegetation inventories | 7000 acres | |
| Quartz/Gold road inventory and channel condition assessment\ | | |

I hope this helps. It may not seem like a lot but does translate to a lot of good things being done for watersheds and fisheries.
