Abstract

Harrington, Constance A.; Kallas, Melanie A., comps. 2002. A bibliography for *Quercus garryana* and other geographically associated and botanically related oaks. Gen. Tech. Rep. PNW-GTR-554. Portland, OR: U.S. Department of Agriculture, Forest Service, Pacific Northwest Research Station. 115 p.

Interest in *Quercus garryana* Dougl. ex Hook., commonly known as Oregon white oak or Garry oak, has increased in recent years as scientists, resource managers, and the general public focus attention on a forest type in decline. To aid those interested in learning what has previously been reported on this species, we have compiled a comprehensive bibliography for *Q. garryana*. This bibliography includes articles published in scientific or technical journals, accepted theses and dissertations, published or widely distributed documents from federal and state organizations, published conference proceedings (as well as chapters from those proceedings), and books (including chapters or articles in edited books). The citations pertain primarily to *Q. garryana*. Some references pertaining to geographically associated oaks, *Q. alba* L. (an eastern species closely related to *Q. garryana*), and general information about the genus *Quercus* also are included. There are 488 citations that refer to *Q. garryana*, 191 that pertain to geographically associated oaks, 131 that pertain to *Q. alba*, and 27 general oak citations. A section entitled "Topics and Keywords" is included to facilitate searching the paper copy of the bibliography for topics of interest. This section lists the citations that pertain to each topic. Keywords are provided for each citation. This bibliography also is available as a portable document format (PDF) file and as an online searchable database.

Keywords: Bibliography, *Quercus garryana*, *Quercus alba*, California oaks.

Introduction

Interest in *Quercus garryana*, commonly known as Oregon white oak or Garry oak, has increased in recent years (fig. 1) as scientists, resource managers, and the general public focus attention on a forest type in decline. *Quercus garryana* has a lower maximum height than its conifer associates, and in the absence of fire, conifers become established in oak stands and eventually shade the oaks out. The species was historically maintained by both natural fires and prescribed fires set by Native Americans. Early European settlement resulted in displacement of Native Americans (and their historical burning activities), suppression of natural fires, and conversion of many oak woodlands and associated prairies into agricultural, and later, urban uses. In addition, some landowners have chosen to convert oak woodlands to coniferous forests to maximize wood production. Recent interest in the species has been triggered, in part, by concerns over wildlife species associated with oak trees or stands (such as the western gray squirrel (*Sciurus griseus*), which is listed as a threatened species in the state of Washington); general issues of regional biodiversity; and increased recognition that without management intervention, oak cover within the region will continue to decline.

We began studying *Q. garryana* in the late 1990s and, as a part of that project, developed a database of references on the species. In our interactions with natural resource managers and researchers working with *Q. garryana*, we learned that others would benefit from our bibliography. Some might question the value in publishing a bibliography that would quickly become out of date when many people have access to electronic databases that can access scientific literature. We have found that many electronic databases, however, do not include older references, university theses or dissertations, or limited-distribution reports prepared by or for public agencies. Student theses do not appear in the large reference databases such as Forestry Abstracts or Agriculture On-Line; they can be located with online searches at many universities, but most university libraries and electronic databases only contain theses associated with their

Figure 1—Dates of *Quercus garryana* publications. Note: All date ranges except the first and last represent a 10-year interval.

own degree programs. Most electronic searches are limited to the words in the title, keywords, or abstract of the reference. There are many other documents that contain useful information on a species but do not mention the species in the electronic search phrases, and thus, will not appear in the search results. We also discovered that existing lists of references, including the published bibliography for California oaks (Griffin et al. 1987), the citations in the updated *Silvics of North America* (Burns and Honkala 1990), and reference lists developed by several natural resource professionals have little overlap in their citations. Thus, we decided to compile a fairly comprehensive bibliography for *Q. garryana* (and associated species—see discussion below) and make it available in both hardcopy and two types of electronic formats. This bibliography will facilitate literature searching by natural resource managers and researchers.

What Is Included

Our bibliography includes articles published in scientific or technical journals, accepted theses and dissertations, published or widely distributed documents from federal and state organizations, published conference proceedings (and chapters in those proceedings), and books (including chapters or articles from edited books). The most common citation is for journal articles; however, papers presented at conferences, workshops, or symposia, and technical reports also are well represented (fig. 2). The citations primarily pertain to *Q. garryana*. We have included some references pertaining to geographically associated oaks (oaks whose geographical range overlaps that of *Q. garryana* in southern Oregon and northern California); white oak (*Q. alba*); and general information on the genus *Quercus*. Citations pertaining to other western oaks are included because of the potential similarity in soils, climatic conditions, associated vegetation, damaging agents, and dispersal mechanisms. Some basic references on *Q. alba* are included because

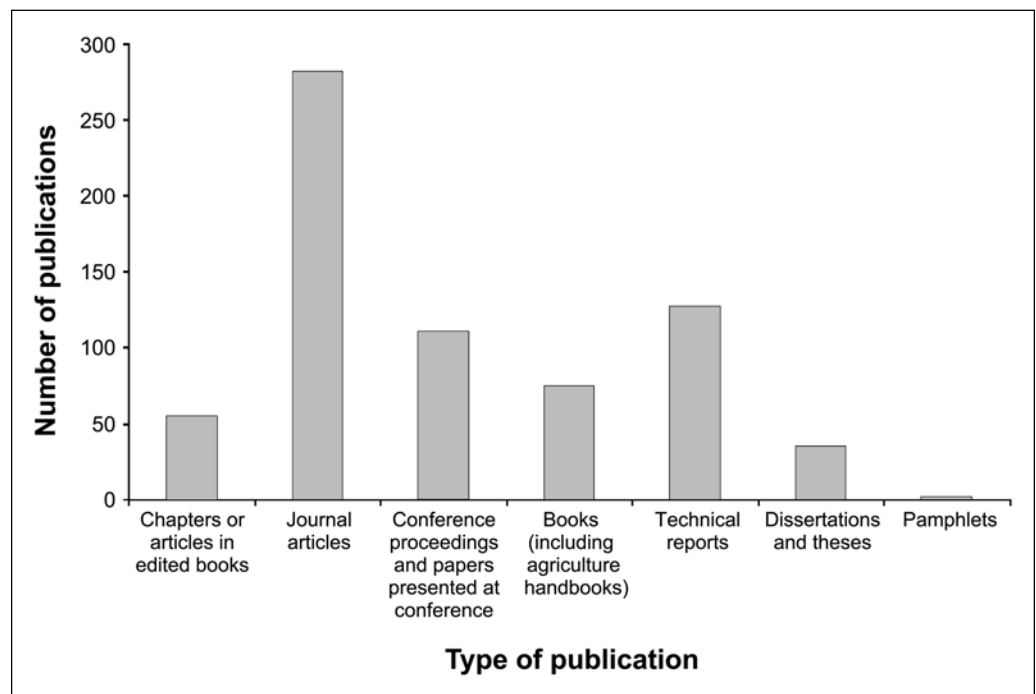

Figure 2—Types of *Quercus garryana* publications incorporated in this bibliography include chapters or articles in edited books, journal articles, conference proceedings and papers presented at conferences, books (including agriculture handbooks), technical reports, dissertations and theses, and pamphlets.

Q. alba and *Q. garryana* are closely related botanically (Daubenmire 1978). Therefore, information on *Q. alba* biology and response to management may be pertinent. We do not include *Q. alba* references that primarily relate to forest inventory, tree distribution, marketing, forest products, pollution or other damaging agents, or plant community descriptions. There are 488 citations that refer to *Q. garryana*, 191 citations pertaining to California and southern Oregon oaks, 131 citations pertaining to *Q. alba*, and 27 general *Quercus* citations. Many of the citations pertaining to California and southern Oregon oaks, as well as a few citations pertaining to *Q. alba*, also refer to *Q. garryana*. Our formal literature search ended December 31, 2000. Several publications beyond that date were brought to our attention and have been included.

Approximately 8 percent of the references listed in this bibliography are available online, including standard references such as *Silvics of North America* (Burns and Honkala 1990), and the updated *Seeds of Woody Plants in the United States* (Bonner, in press). We include the universal resource locator (URL or Web site address) for these references. In the last few years, the research stations of the USDA Forest Service have begun making current publications and some selected older publications available electronically. We have included the URLs for Forest Service publications currently available online. We also have included the URL for the "Core Historical Literature of Agriculture" Web site at Cornell University, as several historical books are available in their entirety on this Web site and can be searched for keywords. In recent years, many journal abstracts, or entire journal articles, also have become available online. We do not include those URLs because they tend to be less stable and because most services that provide the whole article are on trial or subscription bases. We cannot guarantee the stability of the provided Web sites over time; we hope, however, that they will function long enough to be useful to users of this bibliography.

What Is Not Included

This bibliography does not include references to newspaper articles, articles in popular magazines, or reports that would not be available from the issuing agency or in major libraries. Although we included some local or regional floras, we did not attempt to be inclusive in listing such floras. We did not include references that duplicated an earlier version or a less available version unless additional information was provided. We did not include references on prairie plants or prairie restoration unless the reference included information pertaining to oak.

Bibliography Availability and Future Additions

This bibliography (as well as other Pacific Northwest Research Station (PNW) publications) is available as a printed document and as an electronic portable document format (PDF) file online at the PNW Web site (<http://www.fs.fed.us/pnw>). We will post periodic updates to the bibliography on our *Q. garryana* Web site (<http://www.fs.fed.us/pnw/olympia/silv/publications/oak>). This bibliography also is available as a searchable database online and can be accessed through the publications page of the *Q. garryana* Web site. The database will be updated periodically. We encourage readers to send citations for inclusion in the updates (see mailing and e-mail addresses inside the front cover of the printed document). It would be helpful to us if you could provide abstracts, along with the citation or title page, from theses and dissertations, or state, county, or private organization publications as these are the most time consuming references to obtain.

Searching with Adobe Acrobat® Reader™

The PDF file on the PNW Web site can be searched by using the free Adobe Systems Incorporated Acrobat® Reader™.¹ The link for downloading the reader is available on the PNW Web site. To find a keyword in the document, click on the binoculars icon in the main toolbar. This will bring up a “find” dialogue box. The “find” dialogue box will remain open with a “find again” option for repeated searching. Click “find again” or press the “Enter” key on the keyboard to find subsequent incidences of the same keyword. Versions of Adobe Acrobat® Reader™ earlier than 5.0 have a more simplistic “find” function that needs to be reactivated to find each incidence of a keyword (there is no “find again” option). We encourage users to download the most recent version of the reader to take advantage of the “find again” feature.

Using Reference Web Poster®

The searchable database was constructed by using Reference Web Poster®, a collaborative tool for sharing bibliographic references on the Internet. The database can be accessed by anyone with an Internet browser and can be searched online by keyword, author, date, title, or a combination of search parameters (e.g., multiple keywords, or keywords and dates). For the most accurate search results, the keyword field should be searched by using the exact keywords or phrases contained in the keyword lists. The keywords are listed in the “Topics and Keywords” section of this document and are available on the Web site as part of the instructions. The keyword field also can be searched by using a wild-card search. The title field can be searched for any word or phrase contained in the title. The entire bibliography or a selected subset of the bibliography can be exported into any Reference Manager®, ProCite®, or End Note® database. Instructions for use of the searchable database are outlined on our *Q. garryana* Web site.

Obtaining References

Many of the references cited in the bibliography can be obtained directly from your local library or can be requested through an interlibrary loan. Most scientific and technical journals can be found in university libraries. Theses and dissertations can be obtained from the university at which the document was completed. Some of the references cited are not widely available, as indicated by the words “not widely available” after the citation. Please do not request references from the compilers.

Getting Started

The section entitled “Topics and Keywords” can facilitate your search for citations pertaining to a given subject. Look through the broad topics and associated keywords to find your subject. A list of citations associated with these keywords is given under each broad topic. The citations in the bibliography contain a list of keywords as well. Therefore, if you are using a paper copy of the bibliography, look through the citations to find the keywords that interest you (see “Topics and Keywords” for more information about the lists of citations). If you are using the PDF document, search for the keyword(s) of interest to find the citations that pertain to those keywords.

The topic “Links to Other Information Sources” can be helpful. Many of these links indicate that the reference can be obtained electronically on the Internet. Other links refer to citations for symposia proceedings that contain many references included in the bibliography (as well as some references not included in the bibliography but pertaining to related subjects).

¹ The use of trade or firm names in this publication is for reader information and does not imply endorsement by the U.S. Department of Agriculture of any product or service.

Topics and Keywords

Sections follow for several broad subject matter topics, along with more specific keywords used in the bibliography, and the references that fall into each category. A publication is listed in all categories that apply. For example, a reference on the nutritional value of *Q. garryana* acorns may be listed under the topics flowering and acorn production, wildlife occurrence and use, and management and use by Native Americans. The citations listed under each topic are separated into three categories: those that refer to *Q. garryana* are in **bold** typeface; those that refer to California oaks are in *italics*; and those that refer to *Q. alba* are in parentheses. An asterisk (*) after a citation indicates that the citation pertains to a variety or hybrid of one of the above. Citations in plain text refer to the genus *Quercus*. If a reference refers to both *Q. garryana* and another *Quercus* species, the reference will appear in **bold** typeface in the topics section as *Q. garryana* takes precedence over other *Quercus* species in this bibliography. References pertaining to varieties and hybrids of *Q. garryana*, or *Quercus* species other than *Q. garryana* (e.g., California oak species), are listed in the “Species” section by scientific name to facilitate the separation of citations referring to *Q. garryana* and those referring to its varieties and hybrids, or other species. Only references that refer to *Q. garryana* are listed in the “Locations” section.

Scientific and Common Names

Scientific and common names of *Quercus* species and *Q. garryana* varieties found in this bibliography follow the nomenclature used by Little (1979).

Scientific name and authority	Common name(s)
<i>Quercus agrifolia</i> Née	Coast live oak
<i>Quercus alba</i> L.	White oak
<i>Quercus chrysolepis</i> Liebm.	Canyon live oak
<i>Quercus douglasii</i> Hook. & Arn.	Blue oak
<i>Quercus dumosa</i> Nutt.	Coastal scrub oak
<i>Quercus engelmannii</i> Greene	Engelmann oak
<i>Quercus garryana</i> Dougl. ex Hook.	Oregon white oak, Garry oak
<i>Quercus garryana</i> Dougl. ex Hook. var. <i>breweri</i> (Engelm.) Jepson	Brewer oak
<i>Quercus garryana</i> Dougl. ex Hook. var. <i>semota</i> Jepson	Shin oak
<i>Quercus kelloggii</i> Newb.	California black oak
<i>Quercus lobata</i> Née	Valley oak
<i>Quercus rubra</i> L.	Northern red oak
<i>Quercus sadleriana</i> R. Br. Campst.	Deer oak
<i>Quercus wislizeni</i> A. DC.	Interior live oak

**California and
Southern Oregon Oaks**

Quercus agrifolia

Barnhart et al. 1996; Bartolome and Standiford 1992; Brooks and Merenlender 2001; Callaway 1992b; Callaway and D'Antonio 1991; Carmen et al. 1987; Critchfield 1971; Griffin 1971; Holland 1986; Koenig and Knops 1995, 1997b; Koenig et al. 1994a, 1996; Loveless and Loveless 1977; Matsuda and McBride 1986; McMinn et al. 1949; Muick 1991; Muick and Bartolome 1987; Munz and Keck 1973; Oberbauer 1991; Pillsbury and Joseph 1991; Sawyer et al. 1977; Standiford 2002; Storer et al. 2001; Thomas 1980; Wainwright and Barbour 1984; Wolf 1945.

Quercus chrysolepis

Block and Morrison 1991; Block et al. 1992; Borchers and Perry 1990; Burns and Honkala 1990; Carmen et al. 1987; Chesnut 1902; Critchfield 1971; Detling 1968; Griffin 1967; Hann and Larsen 1991; Holland 1986; Koenig and Knops 1995, 1997b; Koenig et al. 1996; Mackie 1903; Muick and Bartolome 1987; Munz 1974; Munz and Keck 1973; Oberbauer 1991; Sampson and Jespersen 1963; Sawyer et al. 1977; Standiford 2002; Standiford et al. 1997; Waring et al. 1978.

Quercus douglasii

Adams et al. 1992a, 1992b; Anderson and Pasquinelli 1984; Barnhart et al. 1996; Barry et al. 1997; Bartolome and Standiford 1992; Block and Morrison 1991; Block et al. 1992; Brooks and Merenlender 2001; Burns and Honkala 1990; Callaway 1992a, 1992b; Carmen et al. 1987; Chesnut 1902; Gordon et al. 1989; Graves 1980; Griffin 1966, 1971; Holland 1986; Knops et al. 1997; Koenig and Knops 1995, 1997b; Koenig et al. 1994a, 1996; Mackie 1903; Mallory et al. 1973; Matsuda and McBride 1986; McCreary

1990; Muick 1991; Muick and Bartolome 1987; Munz 1974; Munz and Keck 1973; Pillsbury and McCaskill 1991; Sampson and Jespersen 1963; Smith 1993; Standiford 2002; Standiford and Appleton 1993; Standiford et al. 1997; Swiecki 1990; Trelease 1917; Tucker 1983; Welker and Menke 1990; Wilson et al. 1991; Wolf 1945.

Quercus kelloggii

Adams and Morrison 1993; Anderson and Pasquinelli 1984; Barnhart et al. 1996; Bartolome and Standiford 1992; Beckham et al. 1981; Block et al. 1992; Boag 1992; Brooks and Merenlender 2001; Burns and Honkala 1990; Carmen et al. 1987; Chiller et al. 2000; Critchfield 1971; Franklin 1979; Gilkey and Dennis 1975; Goldsmith et al. 1981; Griffin 1967; Hall 1998; Hann and Larsen 1991; Hitchcock and Cronquist 1973; Hitchcock et al. 1964; Holland 1986; Hornibrook et al. 1950; Kie 1984; Koenig and Knops 1995; Koenig et al. 1996; Loomis et al. 1995; McDonald 1980, 1992; McDonald and Ritchie 1994; McDonald and Tappeiner, in press; McMinn et al. 1949; Mielke and Kimmey 1942; Milota 1996; Muick and Bartolome 1987; Munz 1974; Munz and Keck 1973; Oberbauer 1991; Overholser 1977; Piekielek and Burton 1975; Pillsbury and McCaskill 1991; Roberts and Smith 1982; Sackett et al. 1992; Sampson and Jespersen 1963; Sawyer et al. 1977; Shelly 1997b; Smith 1952, 1993; Standiford 2002; Standiford et al. 1997; Stern 1978; Storer et al. 2001; Stoutamire 1951; Tucker 1983; Wainwright and Barbour 1984; Waring et al. 1978; Warren 1980; Wilson et al. 1991; Wolf 1945.

Quercus lobata

Adams et al. 1992a, 1992b; Bartolome and Standiford 1992; Berman and Bledsoe 1997, 1998; Block and Morrison 1991; Callaway 1992a, 1992b; Carmen et al. 1987; Cornell 1983; Griffin 1971, 1976, 1980; Griggs 1990; Holland 1986; Koenig and Knops 1995, 1997b; Koenig et al. 1994a, 1996; Matsuda and McBride 1986; McCreary 1990; Muick and Bartolome 1987; Munz 1974; Munz and Keck 1973; Roberts 1983; Shelly 1997b; Smith 1993; Standiford 2002; Thomas 1980; Tucker 1980, 1983; Wilson et al. 1991; Wolf 1945.

Acknowledgments

We thank Gary McCausland, Fort Lewis Forestry Division, for financial support (Interagency Agreement PNW 98–9043–2–IA); Jeanette Robbins, Janet Jones, and Christine Uwizera for typing citations; Donna Loucks for online searches and document delivery; and Laura Hutchinson, North Central Research Station, for additional document delivery. We also thank Marilyn Fuchs, Garry Oak Ecosystems Recovery Team; Robert Pabst and Barbara Schrader, Oregon State University; Jane Kertis, Siuslaw National Forest; and Russell Rodgers, Washington Department of Fish and Wildlife for sharing reference lists with us. Many others copied references and suggested references for inclusion.

Welker, J.M.; Menke, J.W. 1990. The influence of simulated browsing on tissue water relations, growth and survival of *Quercus douglasii* (Hook and Arn.) seedlings under slow and rapid rates of soil drought. *Functional Ecology*. 4: 807–817.

Keywords: *Quercus douglasii*, browse, defoliation, water relations, seedling survival, growth, seedlings, soil moisture, drought, California oaks.

Wells, G.; Anzinger, D. 2001. Lewis and Clark meet Oregon's forests. Portland, OR: Oregon Forest Resources Institute. 223 p.

Keywords: *Quercus garryana*, historical distribution, oak woodlands, fire, oak savannas, plant communities, understory, shrubs, plant associations, Oregon.

Wester, L. 1981. Composition of native grasslands in the San Joaquin Valley, California. *Madroño*. 28: 231–241.

Keywords: *Quercus garryana*, plant communities, plant associations, grasslands, California.

Whitehead, D.R. 1983. Wind pollination: some ecological and evolutionary perspectives. In: Real, L., ed. *Pollination biology*. New York, NY: Academic Press, Inc.: 97–107.

Keywords: General oak, pollination, pollen, flowering, microclimate, anatomy, ecology, evolution.

Whitford, H.N.; Craig, R.D. 1918. Forests of British Columbia. Ottawa, ON: Commission of Conservation. 409 p. (212)

Keywords: *Quercus garryana*, plant description, range, distribution, British Columbia.

Whitlock, C. 1992. Vegetational and climatic history of the Pacific Northwest during the last 20,000 years: implications for understanding present-day biodiversity. *Northwest Environmental Journal*. 8: 5–28.

Keywords: *Quercus garryana*, *Quercus* spp., plant communities, climatic changes, climate, historical distribution, history, Washington, pollen, pollen analysis, macrofossils.

Whitney, G.G. 1982. Vegetation-site relationships in the presettlement forests of northeastern Ohio. *Botanical Gazette*. 143(2): 225–237.

Keywords: *Quercus alba*, eastern oaks, soil, soil moisture, topography, geology.

Whitney, S. 1989. A touch of California. In: *A Sierra Club naturalist's guide to the Pacific Northwest*. San Francisco, CA: Sierra Club Books: 119–125.

Keywords: *Quercus garryana*, range, oak woodlands, plant communities, plant associations, plant description, acorns, wildlife, silvics.

Whittaker, R.H. 1960. Vegetation of the Siskiyou Mountains, Oregon and California. *Ecological Monographs*. 30(3): 279–338.

Keywords: *Quercus* spp., geology, climate, soil, oak woodlands, plant communities, California, California oaks, Oregon.

- Wichman, J.R.; Coggeshall, M.V. 1984.** Effects of seedbed density and fertilization on root-pruned 2–0 white oak nursery stock. *Tree Planters' Notes*. 35(4): 22–24.
Keywords: *Quercus alba*, seedlings, roots, root pruning, fertilizer application, propagation, growth, seedling survival, height, diameter, seedbed density.
- Williams, G.W. 2000.** Early fire use in Oregon. *Fire Management Today*. 60(3): 13–20.
Keywords: *Quercus garryana*, fire, Native Americans, burning by Native Americans, prairie, oak savannas, management, Willamette Valley, Oregon.
- Williams, M.S.; Gregoire, T.G. 1993.** Estimating weights when fitting linear regression models for tree volume. *Canadian Journal of Forest Research*. 23(8): 1725–1731.
Keywords: *Quercus alba*, volume, modeling.
- Williams, S. 1939.** Secondary vascular tissues of the oaks indigenous to the United States. I: The importance of secondary xylem in delimiting *Erythrobalanus* and *Leucobalanus*. *Bulletin of the Torrey Botanical Club*. 66(6): 353–365.
Keywords: *Quercus garryana*, *Quercus* spp., *Quercus alba*, taxonomy, anatomy, xylem.
- Williams, S. 1942a.** Secondary vascular tissues of the oaks indigenous to the United States. II: Types of tyloses and their distribution in *Erythrobalanus* and *Leucobalanus*. *Bulletin of the Torrey Botanical Club*. 69(1): 1–10.
Keywords: *Quercus garryana*, *Quercus* spp., *Quercus alba*, anatomy, morphology, taxonomy.
- Williams, S. 1942b.** Secondary vascular tissues of the oaks indigenous to the United States. III: A comparative anatomical study of the wood of *Leucobalanus* and *Erythrobalanus*. *Bulletin of the Torrey Botanical Club*. 69(2): 115–129.
Keywords: *Quercus garryana*, *Quercus alba*, *Quercus* spp., anatomy, taxonomy, vessels, tracheids.
- Williamson, M.J. 1966.** Premature abscissions and white oak acorn crops. *Forest Science*. 12(1): 19–21.
Keywords: *Quercus alba*, flowering, fertilization, acorns, pollination, acorn development, acorn maturation.
- Wilson, D. 1992.** On endophyte-insect-plant interactions. Eugene, OR: University of Oregon. 114 p. Ph.D. dissertation.
Keywords: *Quercus garryana*, foliage, fungi, diseases, insects, galls, wasps, Cynipidae, ecology.
- Wilson, D. 1995.** Fungal endophytes which invade insect galls: Insect pathogens, benign saprophytes, or fungalinquilines? *Oecologia*. 103(2): 255–260.
Keywords: *Quercus garryana*, foliage, fungi, insects, wasps, galls, Cynipidae, diseases.

- Wilson, D.; Carroll, G.C. 1994.** Infection studies of *Discula quercina*, an endophyte of *Quercus garryana*. *Mycologia*. 86(5): 635–647.
 Keywords: *Quercus garryana*, foliage, fungi, diseases, precipitation, acorns, twigs, Oregon.
- Wilson, D.; Carroll, G.C. 1997.** Avoidance of high-endophyte space by gall-forming insects. *Ecology*. 78(7): 2153–2163.
 Keywords: *Quercus garryana*, fungi, insects, galls, wasps, foliage, Cynipidae.
- Wilson, R.A.; Manley, P.; Noon, B.R. 1991.** Covariance patterns among birds and vegetation in a California oak woodland. In: Standiford, R.B., ed. Proceedings of the symposium on oak woodlands and hardwood rangeland management. Gen. Tech. Rep. PSW-126. Berkeley, CA: U.S. Department of Agriculture, Forest Service, Pacific Southwest Research Station: 126–135.
 Keywords: *Quercus garryana*, *Quercus douglasii*, *Quercus lobata*, *Quercus wislizenii*, *Quercus kelloggii*, California oaks, California, birds, wildlife, habitat, diameter.
- Wilson, S.M.; Carey, A.B. 2001.** Small mammals in oak woodlands in the Puget Trough, Washington. *Northwest Science*. 75(4): 342–349.
 Keywords: *Quercus garryana*, oak woodlands, small mammals, *Sciurus griseus*, habitat, wildlife, oak savannas, plant communities, invasion, prescribed fire, Fort Lewis, Puget Lowlands, Washington, ectomycorrhizae, prairie.
- Wilson, T.M.; Brewster, S.B; Carey, A.B. 1998.** Western gray squirrel progress report: fall 1998 survey results, Ft. Lewis Military Reservation. [Pages unknown]. On file with: USDA Forest Service, Pacific Northwest Research Station, 3625 93rd Ave. SW, Olympia, WA 98512–9193.
 Keywords: *Quercus garryana*, oak woodlands, *Sciurus griseus*, habitat, wildlife, small mammals, acorns, wildlife food source, management, Fort Lewis, Puget Lowlands, Washington.
 Not widely available.
- Witt, J.A. 1979.** Ancient madrona and a stand of Garry oaks in Seattle. *The Arboretum Bulletin*. 42(1): 8–10.
 Keywords: *Quercus garryana*, Washington, age, diameter, distribution.
- Wolf, C.B. 1945.** California wild tree crops. Claremont, CA: Rancho Santa Ana Botanic Garden. 68 p.
 Keywords: *Quercus garryana*, *Quercus garryana* var. *breweri*, *Quercus garryana* var. *semota*, acorns, acorn production, human food source, livestock, nutritional value, *Quercus kelloggii*, *Quercus douglasii*, *Quercus lobata*, *Quercus agrifolia*, California oaks, California.
- Woodwell, G.M. 1974.** Variation in the nutrient content of leaves of *Quercus alba*, *Quercus coccinea*, and *Pinus rigida* in the Brookhaven Forest from bud-break to abscission. *American Journal of Botany*. 61(7): 749–753.
 Keywords: *Quercus alba*, *Quercus coccinea*, nutrients, nutrient composition, nutrient cycling, foliage, budbreak, leaf abscission, eastern oaks.

- Wuenschel, J.E.; Kozlowski, T. 1971a.** Relationship of gas-exchange resistance to tree-seedling ecology. *Ecology*. 52(6): 1016–1023.
Keywords: *Quercus alba*, *Quercus* spp., eastern oaks, photosynthesis, transpiration, foliage, water relations, water loss, light, temperature.
- Wuenschel, J.E.; Kozlowski, T.T. 1971b.** The response of transpiration resistance to leaf temperature as a desiccation resistance mechanism in tree seedlings. *Physiologia Plantarum*. 24(2): 254–259.
Keywords: *Quercus alba*, eastern oaks, transpiration, water loss, water relations, temperature.
- Youngberg, C.T. 1955.** Some site factors affecting the success of reforestation and afforestation activities in the Willamette Valley foothills. *Soil Science Society of America Proceedings*. 19: 368–372.
Keywords: *Quercus garryana*, mixed stands, soil, soil moisture, nutrients, Willamette Valley, Oregon, precipitation, elevation, reforestation, seedlings, seedling survival, seedling mortality, water relations.
- Zinke, P.J. 1977.** The redwood forest and associated north coast forests. In: Barbour, M.G.; Major, J., eds. *Terrestrial vegetation of California*. New York, NY: John Wiley and Sons: 679–698.
Keywords: *Quercus garryana*, California oaks, silvics, plant communities, plant associations, succession, climate, geology, topography, California.
- Zirul, D.L. 1967.** Pollen analysis of a bog in the Garry oak zone of southern Vancouver Island, B.C. Victoria, BC: University of Victoria. 32 p. B.S. thesis.
Keywords: *Quercus garryana*, pollen, pollen analysis, British Columbia, climatic changes, historical distribution.
- Zumrawi, A.A.; Hann, D.W. 1989.** Equations for predicting the height to crown base of six tree species in the central western Willamette Valley of Oregon. Res. Pap. 52. Corvallis, OR: Forest Research Lab, Oregon State University. 9 p.
Keywords: *Quercus garryana*, crown, height, diameter, basal area, growth, yield, modeling, Willamette Valley, Oregon.

The **Forest Service** of the U.S. Department of Agriculture is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, it strives—as directed by Congress—to provide increasingly greater service to a growing Nation.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, or marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call (202) 720-5964 (voice and TDD). USDA is an equal opportunity provider and employer.
