

Black Range Ranger District Fuel Reduction Project, example 1
Gila National Forest
New Mexico
2002

The following photographs represent before and after photos of hazardous fuel reduction.

BEFORE

AFTER

Forest type is pinyon juniper with an understory of oak and a few scattered Ponderosa pines.

Forest vegetation management treatment was thinning to reduce hazardous fuels by thinning trees and brush and leaving the larger more vigorous trees. This will also improve stand health.

This is a Wildland Urban Interface project located around the town of Kingston, New Mexico.
