## *CONIFERS Notes #1*

**Date:** March 13, 2001

**Re:** CONIFERS Release

---

General Release of CONIFERS Version 1.00 is anticipated this month. Currently we are working on the interaction with the MS Windows Registry and making sure that all that works flawlessly. The simulator has been many years (too many) in the making. Version 1.00 will represent the current state of the user interface, although we expect upgrades as the coefficients files and models change, we do not anticipate any major changes to the user interface in the near future. At this time the model is being tested by a number of individuals. Thanks to Dan Blessing, Jeff Teall, Werner Bruckner and Gerald Hellinga for their willingness to work with the Beta version of the simulator and try to break things. They have succeeded, and that is a very good thing.

I will post updates here on the web site ([redding.psw.fs.fed.us/conifers/notes](http://redding.psw.fs.fed.us/conifers/notes)), under CONIFERS Notes, whenever there is news about the simulator.
