CONIFERS Notes #20

Date: October 25, 2010

Re: GUI and R Conifers Modifications

In testing the 1.0.3 version of Rconifers, we found a couple of other problems one with random error and the other with a very small rounding error on the site index in the SMC variant. We also corrected a problem with error flagging of bogus data items on input.

The new version of the R package is version 1.0.5, and can be loaded from the CRAN site in the usual manner. The new version of the GUI is 4.13.

If you encounter any problems with the package, please contact me at the email below.
