

Abstract

Powers, Robert F., tech. editor. 2007.

Restoring fire-adapted ecosystems: proceedings of the 2005 national silviculture workshop. Gen. Tech. Rep. PSW-GTR-203. Albany, CA: Pacific Southwest Research Station, Forest Service, U.S. Department of Agriculture. 306 p.

Many federal forests are at risk to catastrophic wildfire owing to past management practices and policies. Managers of these forests face the immense challenge of making their forests resilient to wildfire, and the problem is complicated by the specter of climate change that may affect wild fire frequency and intensity. Some of the Nation's leading scientists and practitioners present approaches in tackling the problem.

Key words: wildfire, fuel management, thinning, climate change, fire history, resilience

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Restoring Fire-Adapted Ecosystems: Proceedings of the 2005 National Silviculture Workshop

June 6-10, 2005

Tahoe City, California

Robert F. Powers, *Technical Editor*

v INTRODUCTION AND KEYNOTE ADDRESS

vii Introduction and Acknowledgments

Robert F. Powers and F. Michael Landram

ix Keynote Address

The role of silviculture in restoring fire-adapted ecosystems

James K. Agee

1 HISTORICAL AND FUTURE TRENDS

3 Forest changes since Euro-American settlement and ecosystem restoration in the Lake Tahoe Basin, USA

Alan H. Taylor

21 Silviculture and forest management under a rapidly changing climate

Carl N. Skinner

33 MANAGEMENT STRATEGIES

35 Fuels planning: science synthesis and integration

Rachel White and Sarah McCaffrey

41 Stewardship and firehazard assessment: a process for designing a landscape fuel treatment strategy

Bernhard Bahro, Klaus H. Barber, Joseph W. Sherlock, and Donald A. Yasuda

55 Integrating stand density management with fuel reduction

Joseph W. Sherlock

67 Reintroducing fire to the oak forests of Pennsylvania: response of striped maple

Patrick H. Brose, Gary W. Miller, and Kurt W. Gottschalksheppa

79 Reintroducing fire in regenerated dry forests following stand-replacing wildfire

David W. Peterson, Paul F. Hessburg, Brion Salter, Kevin M. James, Matthew C. Dahlgreen, and John A. Barnes

87	Restoring fire-adapted forested ecosystems—research in longleaf pine on the Kisatchie National Forest <i>James D. Haywood</i>
107	SILVICULTURAL OPTIONS
109	Silviculture for the 21 st century—objective and subjective standards to guide successful practice <i>James M. Guldin and Russell T. Graham</i>
121	Free selection: a silvicultural option <i>Russell T. Graham, Theresa B. Jain, and Jonathan Sandquist</i>
157	Landscape silviculture for late-successional reserve management <i>S. Hummell and R.J. Barbour</i>
171	SDI-Flex: a new technique of allocating growing stock for developing treatment prescriptions in uneven-aged stands <i>Wayne D. Shepperd</i>
181	Gap-based silviculture in a Sierran mixed conifer forest: effects of gap size on early survival and 7-year seedling growth <i>Robert A. York, John J. Battles, and Robert C. Heald</i>
193	Effects of alternative treatments on canopy fuel characteristics in five conifer stands <i>Joe H. Scott and Elizabeth D. Reinhardt</i>
211	RISKS AND IMPACTS
213	The relation between tree burn severity and forest structure in the Rocky Mountains <i>Theresa B. Jain and Russell T. Graham</i>
251	Fire performance in traditional silvicultural and fire and fire surrogate treatments in Sierran mixed-conifer forests: a brief summary <i>Jason J. Moghaddas and Scott L. Stephens</i>
261	Delayed conifer tree mortality following fire in California <i>Sharon M. Hood, Sheri L. Smith, and Daniel R. Cluck</i>
285	Effects of fuel reduction treatments on breeding birds in a southern Appalachian upland hardwood forest <i>Aimee L. Tomcho, Cathryn H. Greenburg, J. Drew Lanham, Thomas A. Waldrop, Joseph Tomcho, and Dean Simon</i>
297	POSTER ABSTRACTS
299	Riparian and upland vegetation on the Kings River Experimental Watershed, Sierra Nevada, California <i>Christopher R. Dolanc and Carolyn T. Hunsaker</i>
300	Prescribed burning ineffective for improving turkey habitat on a recently regenerated mesic site in the southern Appalachian Mountains <i>W. Henry McNab, Ted M. Oprean III, and Erik C. Berg</i>

- 301 Putting out fire with gasoline: pitfalls in the silvicultural treatment of canopy fuels
Christopher R. Keyes and J. Morgan Varner
- 302 Thinning and underburning effects on ground fuels in Jeffrey pine
R.F. Walker, R.M. Fecko, W.B. Frederick, J.D. Murphy, D.W. Johnson, and W.W. Miller
- 303 Thinning and underburning effects on productivity and mensurational characteristics of Jeffrey pine
R.M. Fecko, R.F. Walker, W.B. Frederick, W.W. Miller, and D.W. Johnson
- 304 Effect of burn residue proximity on growth of 5 planted mixed conifer species after 6 years
Robert A. York and Robert C. Heald
- 305 Soil responses to the fire and fire surrogate study in the Sierra Nevada
Emily E.Y. Moghaddas and Scott L. Stephens
- 306 The effect of mechanical fuel reduction treatments in the wildland-urban interface on the amount and distribution of bark beetle-caused tree mortality
Christopher J. Fettig, Joel D. McMillin, John A. Anhold, Shakeeb M. Hamud, Robert R. Borys, and Steven J. Seybold
