

Public Suggested Routes Scoring Criteria

RP-105

<i>Score</i>	<i>Resources</i>	<i>Traffic</i>	<i>Interest</i>
3	No resource issues	Easy for proposed traffic now	Connector that would facilitate separating motor and non-motor
2	No insurmountable resource issues	Difficult for proposed traffic now	Widespread interest likely
1	Some resource concerns but manageable	Unknown	Some interest likely
0	Fatal resource problem or clearly moves away from MA goals	Construction / Reconstruction required	Likely limited interest, dead-end to nowhere special etc.

Notes:

Score only user suggested routes that are either not on the system or inactive. Score suggestions to resurrect trails in storage (STO) status. Do not score general area suggestions or suggestions that affect existing system routes.

The scoring guide doesn't cover all situations or provide all examples of everything that might be worth considering in assigning a score. Document your thought process and what else was considered in the narrative along with info on why this suggestion would or would not be considered in an alternative.

Typically a score of 0 in any of the three screens would mean the suggestion would not make it into an alternative.
