MT Department of Natural Resources and
Conservation

Steve Potts

United States Environmental Protection Agency, MT

Mark Delaray, John Fraley, Tom Weaver

Fisheries Biologists, Montana Department of Fish,
Wildlife, and Parks

Dean Yashan

Montana Department of Environmental Quality

Acknowledgements

The Moose Post-Fire Project interdisciplinary team would like to acknowledge the valuable contributions of the many people from the Flathead National Forest and the Regional Office who helped guide and assist in the development of this project. We apologize for any names of people whose name may not appear on this list. We are indebted to all who helped us with our endeavors.

Terry Chute and Rob Carlin for countless long hours providing guidance, support, oversight, editing, and expertise while not losing their sense of humor. Employees from the Tally Lake Ranger District for research into literature citations and developing a process that saved our interdisciplinary team hours of work. Jane Kollmeyer, Tally Lake district ranger, for freely providing us access to her employees for much needed help. Robert Nowak, Jeff Helland, and the rest of the ground pounders who gps'd and ground-truthed units. Kaaren Arnoux and Vienna Senner for providing expertise in formatting the EIS, finding and correcting our many editing errors, and not complaining for everything we piled on them. Allen Rowley and Betsy Evans for designing the Internet Web version of the EIS. Vicki Bodfish for a beautiful document cover. Dan Schrader and Rita Allison for printing the document for internal review and then for publication. The computer shop in the supervisor's office and Three Forks Zone employees Jim Pudelka, Dave Yarger, and Gail Stanley for support when we lost documents, ran out of space, or had computer breakdowns or malfunctions. Regional Office employees and Flathead staff members and other employees who read the EIS and provided valuable comments and suggestions. Jim Reuter, world's fastest typist and his sidekick, Keith VanBroeke, for helping input 150+ letters into our scoping content analysis document. And to all of you who put aside what you were doing at a moment's time to help us stay on track so we could complete this document.
