

Acknowledgements

The Moose Post-Fire Project interdisciplinary team would like to acknowledge the valuable contributions of the many people from the Flathead National Forest and the USDA Forest Service Northern Region Office who helped guide and assist in the development of this project. We apologize for any names of people whose name may not appear on this list. We are indebted to all who helped us with our endeavors.

Terry Chute and Rob Carlin for countless hours providing guidance, support, oversight, editing, encouragement, and expertise while not losing their sense of humor. Employees from the Tally Lake Ranger District for research into literature citations and developing a process that saved our interdisciplinary team hours of work. Jane Kollmeyer, Tally Lake district ranger, for freely providing us access to her employees for much needed help. Kaaren Arnoux and Vienna Senner for providing expertise in formatting the DEIS, finding and correcting our many editing errors, and not complaining for everything we piled on them. Allen Rowley and Betsy Evans for designing the Internet Web version of the DEIS. Vicki Bodfish for a beautiful document cover (we wish it could have been in color as you made it). Dan Schrader and Rita Allison for printing the document for internal review and then for publication. The computer shop in the supervisor's office and Three Forks Zone employees Jim Pudelka, Dave Yarger, and Gail Stanley for support when we lost documents, ran out of space, or had computer breakdowns or malfunctions. Cathy Calloway, who provided comments on the DEIS and then jumped to the plate when we needed last minute help for document input. Regional office employees and Flathead staff members and employees who read the DEIS and provided valuable comments and suggestions. Jim Reuter, world's fastest typist and his sidekick, Keith VanBroeke, for helping input 150+ letters into our content analysis document. And to all of you who put aside what you were doing at a moment's time to help us stay on track so we could complete this document.
