REGIONAL FORESTER, Region 10

1. INTRODUCTION:

This document is a living, working road map that describes in detail the tasks to be accomplished over the next 5 years to implement effective recreation site management. The actions and parameters contained in the tables below are the performance contract between the Forest and the Regional Forester. The monitoring plan, together with required annual accomplishment reporting, constitutes the Forest "report card" for this activity.

This action plan was created through, and is the end result of, the national Recreation Site-Facility Master Planning (RS-FMP) process.

Key to the success of this plan is the preparation of the information from each Ranger District and the commitment from the entire Forest to improve the management and operations of recreation facilities to a standard that protects and satisfies the general public.

TONGASS LEADERSHIP TEAM DIRECTION

The following are action items comment to all of the Tongass National Forest as agreed to at the July 2005 Tongass Leadership Team meeting.

The Objectives and Process to be Followed

The objective of the RS-FMP process is to reduce the current deferred maintenance by 20% in the next five years and to manage Forest Service facilities to standard with the available funding. Available funding includes appropriated dollars, revenue generated from facility use, contributed labor, or other means that can be documented.

The Forest will follow the direction provided in the Recreation Sites-Facility Master Planning Process Guidebook (Current edition is March 2005). Information updates will follow the direction as provided in this guidebook. Updates to the information will be in accordance with the agreements by the Forest for ranking facilities. Information used to assist in the ranking of Forest facilities includes consideration of the forest niche, O&M costs, facility occupancy, and other elements. (See description of ranking considerations beginning on page 48 of the guidebook for Worksheet 5.)

The primary focus will be on closing those facilities that do not fit one of four forest niches, have a high amount of deferred maintenance, and have a low occupancy. Although this is a Forest effort, Districts are provided the maximum flexibility to work with their users to develop a strategy to maintain their facilities to standard. Progress on implementing management options will be reviewed annually by the Tongass Leadership Team (TLT) at the winter meeting.

Review of Fees

The TLT assigned persons to two groups to evaluate existing fees and to recommend changes. Both groups were to prepare a recommendation of any changes to the TLT by October 2005.

One group was to recommend fee changes for cabins and campgrounds. Acceptance of the approval of any changes would then be subject to the approval of the Recreation Fee Board as specified by the Recreation Fee Enhancement Act of 2004. Patricia Grantham and Scott Fitzwilliams are the team lead members for this group.

A second group was to recommend fee changes for the two Tongass Visitor Centers. Again, acceptance of the approval of any changes would then be subject to the approval of the Recreation Fee Board as

specified by the Recreation Fee Enhancement Act of 2004. Scott Fitzwilliams is the team lead for this group.

Other Revenue Study

A recommendation for the potential use of Forest Service facilities by commercial operators (specifically, outfitters or guides) will be provided to the Tongass Leadership Team by September 30, 2006. The focus of the recommendation will be to identify the criteria for when a commercial operation could use a recreation facility and a proposed pricing structure. Recreation facilities could include, but are not limited to, day use facilities, cabins, etc. The objective is to improve use of these sites and to generate revenue to assist in paying the operations and maintenance costs.

Public Involvement

All actions will be subject to public participation to the fullest extent possible. A communications plan for the Forest will be in place when the Action Plan is approved, to assist the Districts in their efforts. The communications plan will emphasize that the RS-FMP effort is Forest-wide in scope but relies on the District Rangers to provide the leadership for their recreation program.

Also, to encourage use of our existing facilities, a cabin marketing plan will be completed by January 2006. Dennis Neill, the Tongass Public Affairs Officer, is the lead for this work.

Common to Management Actions;

Following are the general timelines for the completion of the management actions where the decommissioning of a facility is recommended by a District Ranger. Efforts to accelerate the reduction of deferred maintenance tasks or to increase revenue are not restricted to these timeframes.

In general, a two year window is identified for decommissioning of facilities outside a congressionally designated Wilderness. The two year time period allows time for public notification and the identification of funding to accomplish this work.

A three year window is provided for the decommissioning of facilities inside a congressionally designated Wilderness. Additional time is needed to meet legislative direction for notifying Congress of the removal of facilities within the Wilderness. This also provides time for public notification and the identification of funding to accomplish this work.

Contributed or Alternative Workforce Identification

A three year window is identified for finding an alternative workforce or volunteers to contribute to the maintenance or operations of a facility. The alternative workforce must be identified within the Recreation module in I-web (formerly Infra) when their services are secured. If after three years, an alternative workforce for a facility is not secured (as identified in worksheet 8), the facility will be considered along with other forest facilities the Site Ranking Tool (Worksheet 5) to determine if any further action is needed.

Efforts to improve the reliability of the information in the Site Ranking Tool will continue. Information for the Site Ranking Tool will rely on the current information available through I-web, the National Recreation Reservation System, current budget allocations, or other documentation.

Facilities identified as needing Major Reconstruction must be on the Regional Recreation CIP list for funding. Some adjustments in the Tongass Forest priorities is likely to be examined in 2006 to better align projects on the Regional CIP funding list.

2. RECREATION SITES PRIORITY RANKING REPORT

List the Forests Recreation site in rank score priority order. Include site type, site rank score, site Tier Category, planned management season, and planned site capacity.
