

Warren Wilderness

Wilderness Character

Warren Peak rises dramatically from the sea to 2,329 feet above Warren Island, off the northwestern coast of Prince of Wales Island, about 75 air miles from Ketchikan. Covered in typically dense coastal spruce-hemlock rain forest, the area usually gets battered by extremely strong, wet winds that have twisted many of the trees near the shoreline. A few small, protected coves and beaches dent the leeward side of the island, but the rest of the shoreline is rock and windswept cliffs protected by dangerous shoals. Lack of boat anchorages and floatplane landing sites, combined with exposure to the open sea, makes access difficult, and Warren Island is, in fact, inaccessible much of the year. Sea lions, seals, whales, and sea otters may be seen along the shoreline, and Sitka black tailed deer, black bears, and wolves have been spotted inland. Bald eagles live here, but Warren Island is best known for its seabirds.

In 1980, the United States Congress designated 11,181 acres as the Warren Island Wilderness. Warren Island is located 40 miles northwest from the communities of Craig and Klawock on Prince of Wales Island. This Wilderness is 10 miles directly east of the Coronation Island Wilderness. The wilderness area can be accessed by boat or floatplane. The Tongass National Forest manages this undeveloped, enduring ecosystem to preserve them for the enjoyment of present and future generations.

Wilderness Management Direction

Management direction for the wilderness comes from the Wilderness Act, the Alaska National Interest Lands Conservation Act (ANILCA), and the Tongass Land and Resource Management Plan, as amended, 2008. The Wilderness Act prescribes the general management direction, but ANILCA provides for some specific exceptions. Direction includes:

- The Wilderness Act prohibits commercial uses with the exception of what may be allowed as necessary for visitor services.
- The Wilderness Act prohibits the use of motorized equipment, but ANILCA Section 1316 can allow for the continued use of traditional equipment directly necessary for the taking of fish and game (subject to regulation and compatibility).
- The Wilderness Act prohibits mechanized form of transport (i.e. bicycles, wheelbarrows), but ANILCA Section 811 can allow for the continued use of traditional equipment used for subsistence activities by rural Alaska residents (subject to regulation and compatibility)
- While the Wilderness Act prohibits the use of aircraft, ANILCA Section 1110 allows for the use of airplanes, motorboats, and snow-machines (during periods of adequate snow cover). Helicopters are not specifically identified in the ANILCA exception and their use is prohibited.
- The Tongass Plan identifies **group size limit of no more than 12 persons** for commercial or general public use within this wilderness.

These regulations are established for the wilderness character to remain undeveloped, natural and untrammled for future use.

Wilderness Challenges

People are lured to Alaska for its beauty and excitement, but the environmental conditions can be very unforgiving. The Warren Island Wilderness is within a temperate rainforest where the average summer temperatures are between 45-65°F. Be prepared with the appropriate clothing, safety equipment, shelter supplies, and water purifying devices for a cool and frequently overcast climate. If traveling by boat to the wilderness area, be aware of the strong prevailing winds and rocky shorelines that can make anchoring difficult to almost impossible.

Threats and Benefits

While designated wilderness areas have the most protections of any other public lands, there are still threats that degrade the wilderness resource. Damaging of cultural and historical sites, illegal outfitting and guiding, and resource damage by the spread of invasive species, and impacts to cave resources are the major human threats to these wilderness areas. Building awareness and a better understanding of designated wilderness areas is the key foundation to ensure that these areas stay wild.

Along with providing recreational opportunities, designated wilderness areas protect natural ecosystems. They provide us with clean air and clean water, and allow the natural processes to continue without the permanent presence of humans. Due to the action of Congress in 1980, the Warren Island Wilderness will remain protected for future generations.

Wilderness Facilities

There are no established hiking trails or public recreation facilities in this wilderness area. Due to the remoteness, this area provides for excellent opportunities for solitude and exploration.

Leave No Trace

To insure that this area is left unimpaired for future use, practice the following Leave No Trace principles.

- Plan ahead and prepare for extreme weather conditions, hazards, and emergencies.
- Clean equipment and gear **before** going to the field to avoid the potential spread of invasive plants or seeds.
- Travel and camp on durable surfaces. When possible, disperse use to prevent the creation of campsites and trails.
- Dispose of waste properly. **Pack out** all trash, leftover food, and toilet paper. At appropriate conditions dispose of human waste in the intertidal zone. If camping in upland forests dispose of solid waste by digging a cat hole 6 to 8 inches deep located at least 200 feet from water or campsite.
- Leave what you find. Examine but do not touch the historical structures or artifacts.
- Minimize campfire impacts. Use a lightweight stove when possible. When a campfire is necessary, keep fires small. Build a fire below mean high tide, or when in a forested area, build a mound fire or use a fire pan to avoid damaging the ground vegetation. Stay away from boulders or tree bases to avoid long lasting black scars.
- Respect wildlife and be considerate of other visitors.
