

Step 6- Reporting

The Purpose of this step is to:

- Report the key findings of the analysis by incorporating the assessments made in previous sections into site-specific recommendations for change.

The products of this step are:

- Results including a site-specific list of technical recommendations, along with maps that document:
 - Recommended changes to the transportation system,
 - Unneeded roads suggested for future decommissioning projects, and
 - A suggested designated system of roads, trails, and areas for motor vehicle use, including dispersed camping sites.

Report

This report is available to the public, if requested and will become part of the *Apache-Sitgreaves National Forests Public Wheeled Motorized Travel Management EIS* project file.

Key Findings of the Analysis:

The following pages contain a list of site-specific recommended changes. This table includes roads recommended for designation and routes recommended for decommissioning.

Maps displaying the spatial attributes of these tables follow. The map section also contains a map displaying suggested dispersed camping locations for designation.

Discussion

The analysis from step 5, including risk and value ratings, was used to develop the proposals documented on the following tables and maps. This information is meant to strategically guide further management of the forest transportation system. In general, most recommendations follow the matrix described in step 5. Implementation of recommendations associated with moderate or high resource concerns should utilize mitigation measures and best management practices to reduce environmental effects. Additional site-specific management considerations should be developed during subsequent project-level planning and environmental analysis efforts.
