

Ruby Mountains Ranger District

2008 Annual Operating Instructions

PERMITTEE: Duval Ranching Company
 ALLOTMENT: Horse Creek & Cave Creek C&H

The following is your Annual Operating Instructions for the Horse Creek & Cave Creek C&H Allotment(s), as discussed on March 13, 2008. These instructions supplement and are part of your Term Grazing Permit under Part 2, 8(a) of the permit. The year 2008 cost per Head Month is \$1.35. Payment must be received by the due date listed on the Bill for Collection. Upon payment of fees you are authorized to graze as follows:

Authorized Use and Routing

Allotment	Numbers	Class	Season	Days/Head Month
Horse Creek #00214				
Arizona Spring	190	Cow/Calf	5/15-6/14	31/194
Horse Creek	450	Cow/Calf	6/15-7/14	30/444
Woolverton	REST	REST	REST	
Cave Creek #00203				
South Unit	60	Cow/Calf	5/25-6/25	31/63
North Unit	150	Cow/Calf	6/26-8/15	51/252
Wild Horse	REST	REST	REST	

Forage Utilization Standards and Guidelines

- The permittee is responsible for tracking and complying with permitted forage use levels stated below and in your Term Grazing Permit.
- Once use levels have been reached movement to another unit or removal of livestock will be required regardless of time remaining in the grazing season or Head Months paid for.

Horse Creek C&H

Management Category	Area Name	Key Species	Utilization
Class II Riparian	Springs & Seeps	Desirable Grasses & Forbs	45%
Class III Riparian	Franklin River Horse Creek Woolverton Creek Springs & Seeps	Desirable Grasses & Forbs	55%
Class V Riparian	All Units	Desirable Grasses & Forbs	65%
Upland Areas	All Units	Desirable Grasses & Forbs	50%
*Upland Browse	All Units	Shrubs & Aspen	35%
*Riparian Browse	All Streams	Shrubs & Aspen	35%

Cave Creek C&H

Management Category	Area Name	Key Species	Utilization
Class III Riparian	Springs & Seeps	Desirable Grasses & Forbs	60%
Class IV Riparian	Cave Creek Willow Creek	Desirable Grasses & Forbs	60%
Class V Riparian	All Units	Desirable Grasses & Forbs	65%
Uplands Areas	All Units	Desirable Grasses & Forbs	50%
*Upland Browse	All Units	Shrubs/Aspen	45%
*Riparian Browse	All Streams, Springs & Seeps	Shrubs/Aspen	35%

*Utilization based on current year's growth for browse and shrubs

General Range Management

- Salt and Supplement Placement: Place salt or supplement at least 200 yards from water sources, roads, trails and recreation sites. Place salt in areas lightly grazed to encourage an even distribution of utilization on the range. Salt will be removed from areas where maximum allowable use levels have been reached or at the end of the grazing season. Salt fed in loose form shall be contained in an approval receptacle that will keep it from spilling onto the ground.
- Riding and Herding: To improve livestock distribution and reduce resource damage we encourage the riders to breakup livestock concentrations and move them away from water or sensitive areas to areas with lighter use.
- Disposal of Dead Livestock: Dead livestock shall be moved to a location greater than 300 feet of any water source, out of view of roads or trails, and away from areas of significant public use.
- Noxious Weeds: Your assistance is needed in identifying new infestations of noxious weeds. Pay particular attention to areas where stock are concentrated such as loading/unloading areas, water developments, and salting areas. By USDA order 04-00-097, all non-pelletized hay, straw or mulch possessed, stored, or transported on National Forest System Lands, in individual bales or containers, must be tagged or marked as noxious weed free, or must have the original and current evidence of noxious weed free certification documentation present. All markings must meet the State and/or county standards for certification as noxious weed free. It is your responsibility to ensure that your livestock do not contribute to the transport of noxious weeds onto the allotment.

Vegetation Monitoring

We strongly encourage you to take utilization measurements (see the Nevada Rangeland Monitoring Handbook or Ranchers' Monitoring Guide <http://www.ag.unr.edu/nsrm>) in designated key areas of your pastures. Doing so will track when livestock need to be moved to ensure standards are met. We will work with you to ensure that you understand the monitoring methods and will assist in determining key areas. Monitoring forms are available at the ranger station. You are encouraged to send your monitoring data to your Rangeland Management Specialist to be kept in your permanent file.

Range Improvements

- All improvements will be maintained prior to livestock entering the allotment.
- If the allotment is in non-use status, you are still responsible for improvement maintenance.
- Improvements used in common will be maintained before either operator is scheduled to turn on.
- Please work with the Rangeland Management Specialist to develop a replacement schedule for large projects and troughs.
- All the improvements which you are responsible for maintaining are listed in Part 3 of your Term Grazing Permit.

Meeting Notes (Structural/Nonstructural Improvements, Rotation, etc.)

-This years authorized use requested by the permittee is 52% of the permitted use for Cave Creek and 62% of Horse Creek. The Wild Horse unit of the Cave Creek C&H is not usable for livestock and has not been used for years because of lack of water (EIS-make wild horse pasture only). The South Pasture dries up early and can only be used for a short time in the spring according to permittee. The North pasture is much more productive. If conflict arises from Shantytown project in North Pasture adjustments must be made.

-Horse Creek is high intensity short duration-need to evaluate effectiveness.

-Need to monitor to see if stocking rate/season need to change.

-Check Woolverton Basin Trough (Bert Spring Trough)

-Permittee maintained/Repaired Jenkins Spring Development-cement collection

-Permittee requests to put trough at NW corner of sec, 5 near spring-need to field check (water rights will probably prohibit)

-Need to establish key areas

Nonuse

Please remember that a request for nonuse must be made in writing in advance. Nonuse for permittee convenience can be authorized for no more than 3 consecutive years, and not more than 4 years in any 10 year period.

Grazing Use Record

Enclosed is a Grazing Use Record for the upcoming season. Please use this form to record the dates livestock spend on the allotment as well as other information such as livestock loss, grazing use, resource concerns, improvement needs, etc. The grazing use record should be submitted to the district office by December 31. Blank forms can be found at:

<http://www.fs.fed.us/r4/htnf/resources/range/index.shtml>.

Notice

The permittee will provide the Ruby Mountains/Jarbidge District with written notification of any changes or deviation he or she wishes to make in these Annual Operating Instructions. This includes changes in animal numbers, class of livestock, period of use (changes in entry or exit dates from unit to unit), or changes in pasture rotation. No changes in these instructions will be recognized without this verification.

We look forward to working with you and solicit your cooperation and involvement in bringing about sound range and livestock management practices that will enhance all of the allotment resources. If you have any ideas or suggestions that will improve the management of the allotment, we would like to hear from you. Please keep us posted about activities and conditions on the

allotment. If you have any questions or concerns regarding management, please don't hesitate to contact Garry Brown at (775) 752-1714.
