Subject Lake timber sale

**Lake Timber Sale**

Timber sale will have no detrimental effect on range management practices. Possible short term rotation modifications to accommodate regeneration of aspen to 6' in height.

Cumulative effects of recreation only to range, no bearing on timber sale project.

Timber harvest has the potential to spread invasive and noxious weeds. It is not an issue however if mitigation is established. Stipulations in the contract to wash equipment and monitoring for noxious and invasive weeds during stand inspections, to track and treat the areas harvested.
