

# Tibble Fork and Silver Lake Flat Summer Home Sites Hazardous Fuels Treatment Project

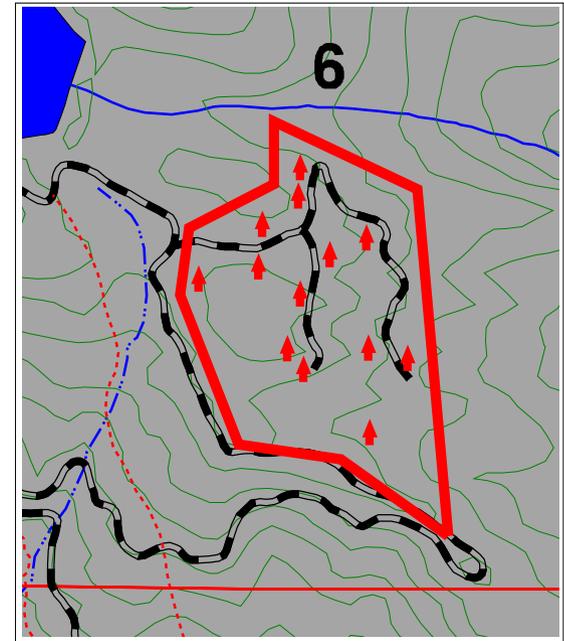

The cumulative effects area for this project will include the area that drains into the Tibble Fork Reservoir.

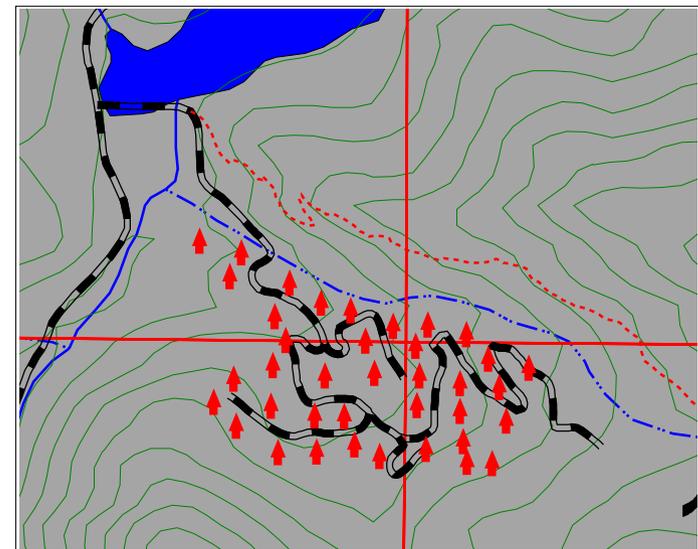

Silver Lake Flat - Fuels treatments in this area will be primarily focused along the roadways. Fuels treatments in the interior portion of the summer home site will be secondary to this overall project.

The intent is to reduce fuels below the site in order to provide a fuelbreak for any fire that might be ignited in the canyon below and burn toward the summer homes. The roadway will make a suitable firebreak, combined with the fuels reduction activities along the road.
