

Figure 2. White Pine Creek (08/24/2007) showing good riparian vegetation and good bank stability.

Figure 3. Large wet meadow located at the bottom of White Pine Creek (08/24/2007). While some livestock grazing has occurred in this area, Nebraska sedge heights are over 12” and meadow/stream conditions were good.

Figure 4. Water from unnamed springs located north of Hansen Hollow (08/4/08) showing poor riparian conditions. Water from springs flows approximately 1/3 mile before entering the Logan River. Heavy cattle use was noted along the entire length of stream.

Figure 5. Water from unnamed springs located north of Hansen Hollow (08/4/08) showing poor riparian conditions. Water from springs flows approximately 1/3 mile before entering the Logan River. Heavy cattle use was noted along the entire length of stream.
