MEMORANDUM OF UNDERSTANDING
Between The
PROFESSOR SUSAN R. KEPHART
And The
USDA, FOREST SERVICE
WASHINGTON OFFICE

This MEMORANDUM OF UNDERSTANDING (MOU) is hereby made and entered into by and between the Professor Susan R. Kephart, hereinafter referred to as "Professor Kephart," and the USDA, Forest Service, Washington Office, hereinafter referred to as the "U.S. Forest Service."

Title: Camassia & Hastingsia Research Project

- I. PURPOSE:** The purpose of this MOU is to document the cooperation between the parties to document current distributions of taxa in the two genera *Camassia* and *Hastingsia* and to resolve the taxonomy of these taxa in accordance with the following provisions.

II. STATEMENT OF MUTUAL BENEFIT AND INTERESTS:

The FOREST SERVICE is a natural resource agency dedicated to the sustained management of the Nation's natural resources and providing service to people through Federal law and regulations administered by the Secretary of Agriculture. The FOREST SERVICE is responsible for managing habitats that maintain sustainable populations of plants and animals on approximately 193 million acres of National Forests and National Grasslands in 43 states. The FOREST SERVICE acquires, develops and disseminates up-to-date information on proposed, threatened, endangered, sensitive, and candidate plant species' status, distributions, population trends, ecology, conservation needs, and stewardship. This information is essential to the FOREST SERVICE to implement management activities that conserve these natural resources both *in situ* and *ex situ*. The FOREST SERVICE accomplishes these mandates in part by utilizing the resources and expertise of university researchers. The expertise of university researchers is critical to the FOREST SERVICE as it strives to restore, maintain, and enhance population and habitats for over 422 species of plants and animals listed under the Endangered Species Act as proposed, threatened or endangered, and provides special management for over 2,000 plant species designated by the FOREST SERVICE as sensitive species or species of concern. Management of these vulnerable components and links in the biodiversity chain is crucial to implementing the FOREST SERVICE mission for land and resource management. The FOREST SERVICE accomplishes much of this work by initiating and developing cooperative relationships and effective partnerships through its National Forest System, Research and Development, International Programs, and State and Private

Forestry.

PROFESSOR KEPHART is a botanist and Professor of Biology at Willamette University in Salem, OR with research expertise in the areas of plant taxonomy and evolution, plant-pollinator interactions, and conservation biology. She is responsible for research, teaching, and citizen education based efforts focused in the area species management, biodiversity monitoring, conservation, and restoration. Her proposed work will help federal agency botanists in their efforts to identify plant taxa whose taxonomy has been challenging at the specific and subspecific levels, resulting in better keys for identification and an improved understanding of the distribution and ecology of these plants. Professor Kephart's work will also increase our knowledge of their associated co-flowering plants, pollinators, and herbivores as well as levels of gene flow and reproductive isolation that can influence their management. In addition, data collected on flowering phenology over multiple years will be available and useful for assessing the potential impacts of global climate change on plant populations. Her research has been funded by diverse grants from grants including from Earthwatch Institute, the M.J. Murdock Foundation, the Native Plant Society of Oregon, Oregon Community Foundation, National Science Foundation, and Willamette University.

In consideration of the above premises, the parties agree as follows:
