

IBS Release Notes for Ver. 1.2.5

This is a synopsis of the new and corrected functionality included in version 1.2.5. the primary objective for this release is to correct errors in the program, updates and add new features.

Version Access

Type in the URL into GOGGLE CHROME, do not use a favorite link or a copy paste.

URL: apps.fs.usda.gov/ibs (nothing after the “IBS”)

[CLEAR the Cache](#)... your computer will go to the old version if you don't not clear your cache, and it will not function correctly.

New Items:

New Access requirements for FOREST SERVICE (FS) Data Entry Users. A 6500-214 form signed by the user's supervisor needs to be submitted to ASC for all new FS users and FS users that have lost access and are re-requesting access.

<https://apps.fs.usda.gov/bf/fs6500.214> this form uses Google Chrome.

- [Electronic signatures preferred](#), but not required.

Fixes:

Extended Standby (ES) can now be added more than once on an invoice.

Example: Fuel truck ES drive time and pilot ES time

FT and ES can now overlap.

Incident or Project name error message will now say “Incident or Project Name exceeds max length of 20 char.” Instead of “flight_order”:[“flight Order exceeded max length of 20”]. Due to integrations with other applications it can not be increased to more than 20 characters.

Example: “FY2021 ABC National Forest Fire Season Support” could be shortened to “FY21 ABC NF Support”

The splitting of accounting codes error was fixed, the ability to split the cost on a flight leg can now be down without a work around.
