

Figure 3– Drop pattern characteristics for the Bambi 324-gallon helibucket with an airspeed of 59 knots and a drop height of 47 feet. The contour lines are at 0.5, 1, 2, 3, 4, 6, 8, and 10 gallons per 100 square feet.

Figure 4– Drop pattern characteristics for the Bambi 324-gallon helibucket with an airspeed of 19 knots and a drop height of 47 feet. The contour lines are at 0.5, 1, 2, 3, 4, 6, 8, and 10 gallons per 100 square feet.

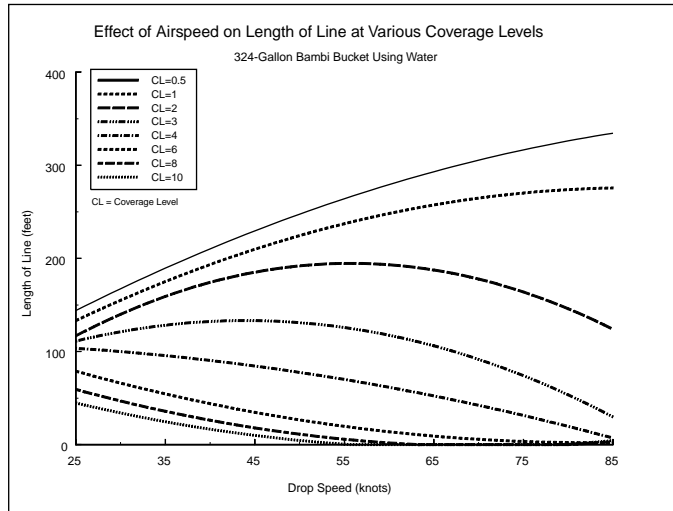

Figure 5– Use the graph to estimate the speed needed to produce the longest line of water at various coverage levels.

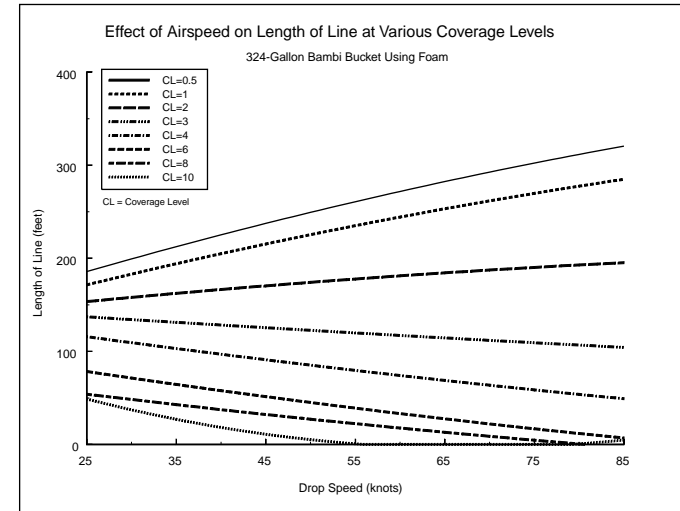

Figure 6– Use the graph to estimate the speed needed to produce the longest line of foam at various coverage levels.

Figure 7– Use the graph to estimate the speed needed to produce the longest line of gum-thickened retardant at various coverage levels.

Figure 8— Drop test of the Bambi 324-gallon helibucket.

About the Authors...

Gregg Johnson is Project Leader of the Aerial Delivery Systems Project for the Wildland Fire Chemical Systems Program at MTDC. He received his bachelor's degree in chemistry from the University of Montana in 1969 and has more than 30 years experience in retardant chemical and aerial delivery systems research. He has worked for the Rocky Mountain Research Station's Fire Sciences Laboratory in Missoula and for MTDC.

Cammie Jordan is a Project Assistant for the Wildland Fire Chemical Systems Program at MTDC. She is an elementary education student at the University of Montana and has worked for MTDC since 1998.
