

I-TREE AND URBAN FIA—WHAT'S THE CONNECTION?

David J. Nowak¹

Abstract—The i-Tree program (www.itreetools.org) was developed to assess ecosystem services and values from trees and forests based on measured forest data. The i-Tree program is currently being integrated with FIA data to assess various ecosystem services and values from urban FIA data. This presentation will overview the history and use of i-Tree; the various tools of i-Tree and how i-Tree assesses ecosystem services and values.
