¹Unofficial name and "fourteener" (not recognized by the USGS as a distinct summit, and thus not named on USGS topos), but included herefor the purists and true peakbaggers.

²Officially named and appearing on USGS topos, but not recognized as an official "fourteener" by some, due to saddle drop and/or closeness to an adjacent peak.

³Distance and vertical gain are for the "standard" route, which is generally the easiest, based on an approach with a "normal" vehicle. Four-wheeling can reduce the approach (sometimes considerably) on some climbs, which likewise can reduce the grade of difficulty.

⁴Difficulty: The Grade is the overall difficulty based on the distance, vertical gain, and various tangibles and intangibles. The letter "A" is easy, "B" is moderate, etc. The Class is the technical hardness of the route, using the standard Sierra Club system. The Letter "E" indicates exposure, which can be considerable.

¹Unofficial name and "fourteener" (not recognized by the USGS as a distinct summit, and thus not named on USGS topos), but included herefor the purists and true peakbaggers.

²Officially named and appearing on USGS topos, but not recognized as an official "fourteener" by some, due to saddle drop and/or closeness to an adjacent peak.

³Distance and vertical gain are for the "standard" route, which is generally the easiest, based on an approach with a "normal" vehicle. Four-wheeling can reduce the approach (sometimes considerably) on some climbs, which likewise can reduce the grade of difficulty.

⁴Difficulty: The Grade is the overall difficulty based on the distance, vertical gain, and various tangibles and intangibles. The letter "A" is easy, "B" is moderate, etc. The Class is the technical hardness of the route, using the standard Sierra Club system. The Letter "E" indicates exposure, which can be considerable.
