This document, the “Science Advisory Group Effects analysis for the Supplemental Draft Environmental Impact Statement (SDEIS) Alternatives”, is part of the official administration record of the Science Advisory Group of the Interior Columbia Basin Ecosystem Management Project. The analysis in the document refers ONLY to a pre-publication draft (April 1999) of Chapter 3 of the Interior Columbia Basin SDEIS. It was prepared by key Science Advisory Group members for use in the development of the environmental consequences later published as Chapter 4 of the SDEIS. The analysis was not developed for publication; rather, this document is a preliminary working draft.
