Supplemental Map: Scenario 4 - equilibrium + 0.5°C
Probability that cutthroat trout hybridization exceeds 20% rainbow trout alleles (PRTA 20%)

The streams shown have been filtered as follows: slope <15°, summer flow >0.028 cms, and no NHD intermittent channels (FCODE=46003)
from: Climate, demography, and zoogeography predict admixture thresholds in salmonid hybrid zones in Rocky Mountain streams, M.K. Young, et al., 2016
