

Dumroese Data Overview

High soil temperature data archive

Measured soil information for all three experiment locations (Lubrecht Experimental Forest, Priest River Experimental Forest, and Pringle Falls Experimental Forest) can be found in the “Summary_soildata” file. The soil temperature data from each location can be found in the folders with their respective names.

Data from Pringle falls are organized into two files: High Severity, and Low Severity. Each file has several worksheets named with the scientist’s plot naming convention. Data from Lubrecht are organized by texture, and season of burn, noted in each file name.
