

What's New MIDAS 2013

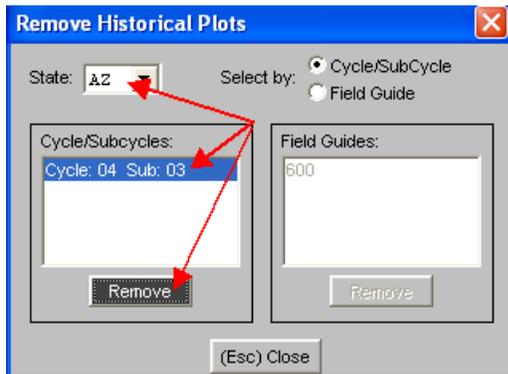

Deleting old Historical data (Needs to be completed before downloading 6.0 historical plots)

Laptop-

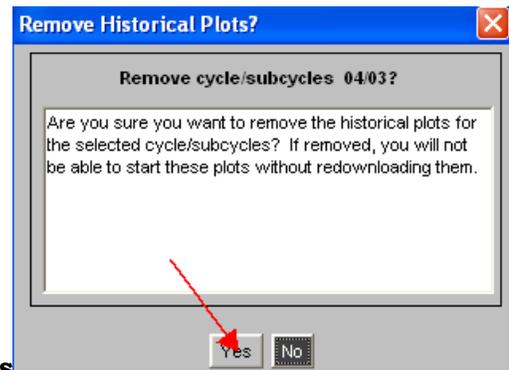

Open Midas Mobile from your desktop, login using your PDR password.

Click on **Tools**---> click **&Remove Historical Plots**---> Select the state & cycle/subcycle click **Remove**->

Then Click **Yes**

REPEAT THE PROCESS UNTIL ALL PLOTS ARE REMOVED!

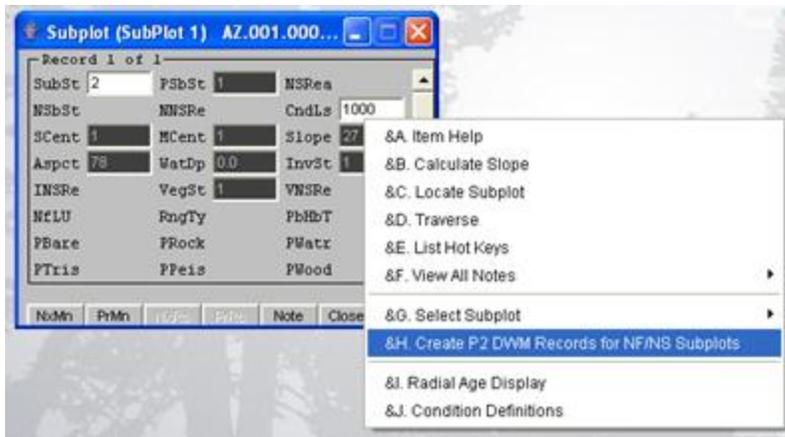

PDR-

Repeat the process on the PDR.... Your new Allegro MX should not have any historical data, but if for some reason it does remove all historical data.

P2 DWM AUTOFILL FOR NONFOREST/NONSAMPLED SUBPLOTS (Not for ACI)

On A Nonforest or Nonsampled Plot After filling out the **SUBPLOT** menu choose **F5**

Click--> **H. Create P2 DWM Records for NF/NS Subplots**

Click-→ **Yes**. All necessary fields in the following menu will be auto filled; dwm Trans, dwm CWD, dwm FWD, dwm DUFF, dwm Resid

Repeat this process on all Nonforest/ Nonsampled Subplots

CROWN COVER CALCULATOR

New for this year while entering trees into the Crown Cover Calculator, **ENTER** will now act like a **RIGHT ARROW** and move the cursor to the next position. And in **Status** you can now enter a **1** or **L** for **Live** and a **2** or **M** for **Missing**. This should help the flow of the screen making it more user friendly.

CTRL/ALT+E

A long text entry screen similar to the Note screen has been added. Pressing **CTRL/ALT+E** while a long text entry attribute has focus will bring up a dialog box. This will be very useful when entering Reserved Area Name on the condition menu, and while entering information into the new Ownership screen.
