

How to print MIDAS plots after you have already uploaded them to the database.

When you upload your completed plots to the MIDAS database, they are removed from the **Work** folder on your laptop and copied into the **DbLoadedData** folder. When you choose to **Print Field Plots**, you will need to select a different folder source to print from.

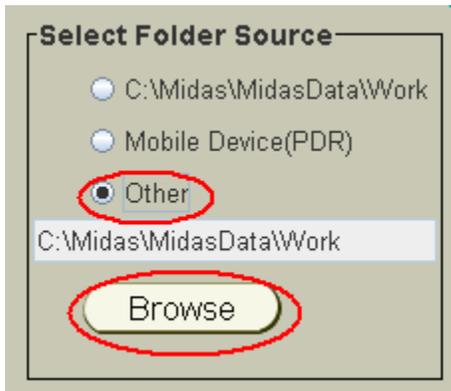

Double click on the **Midas Control Panel** icon on your desktop.

Click on the Print Field

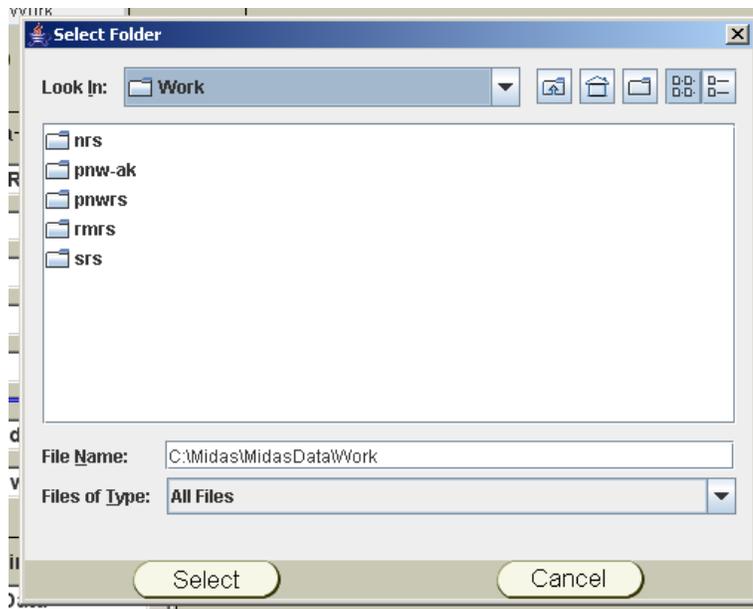

Plots utility.

In the upper left hand corner of the **Print Plots** screen, there is a box labeled **Select Folder Source**. Click on the button labeled **Other** in this box.

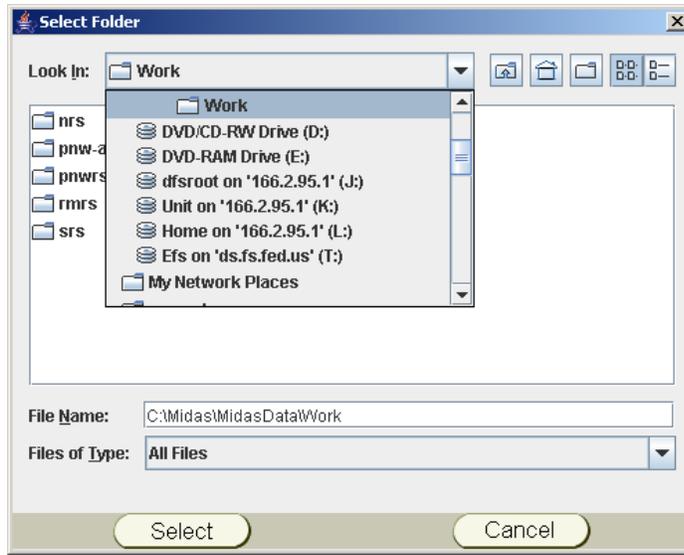

Then click on the white **Browse** button below it. This will bring up

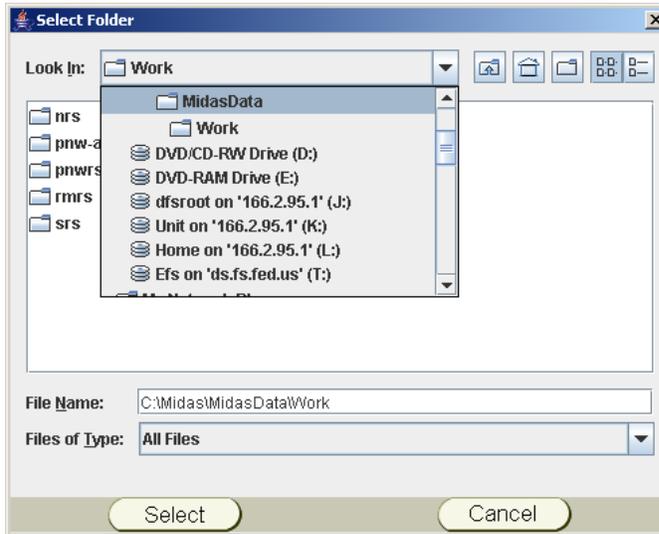

the **Select Folder** screen.

Click on the

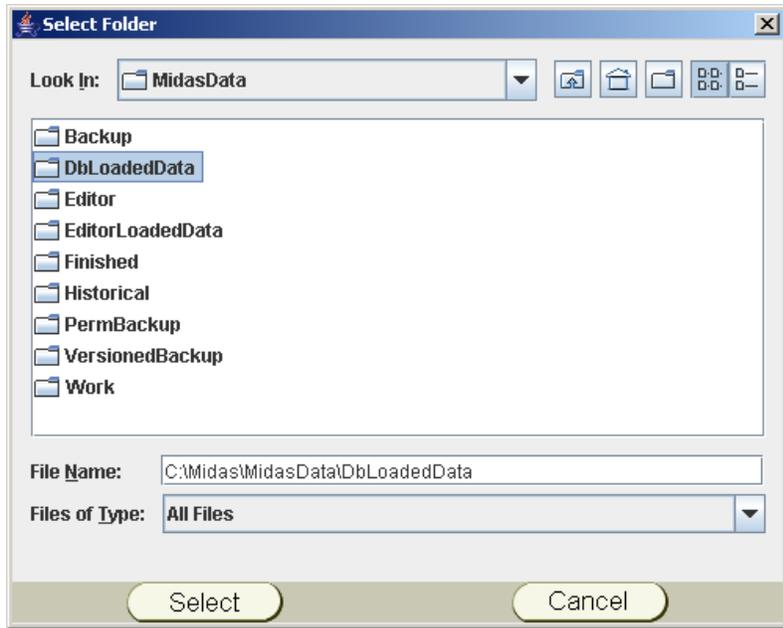

Drop-Down box

and scroll up to the

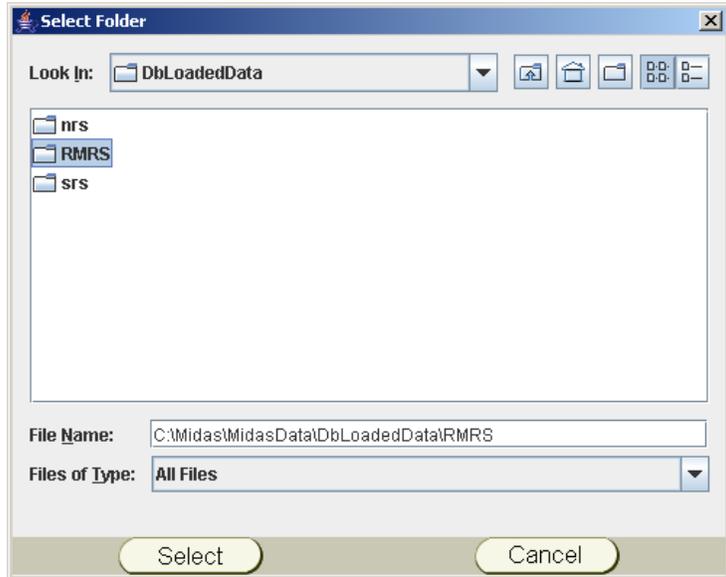

MidasData folder

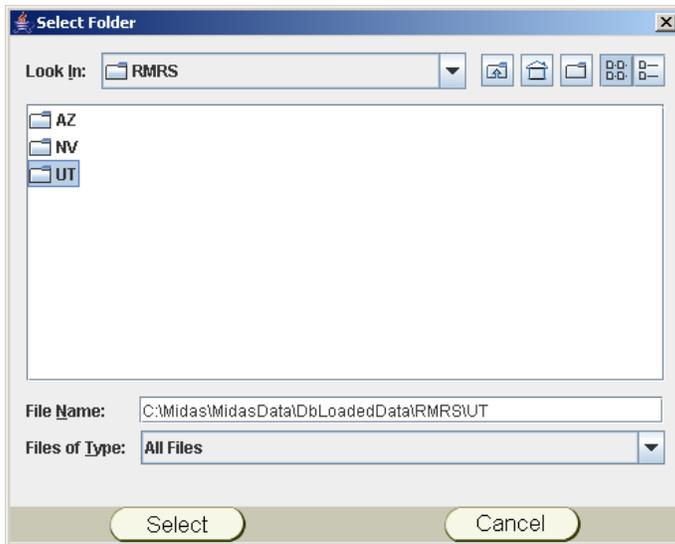

and click on it. Then double-

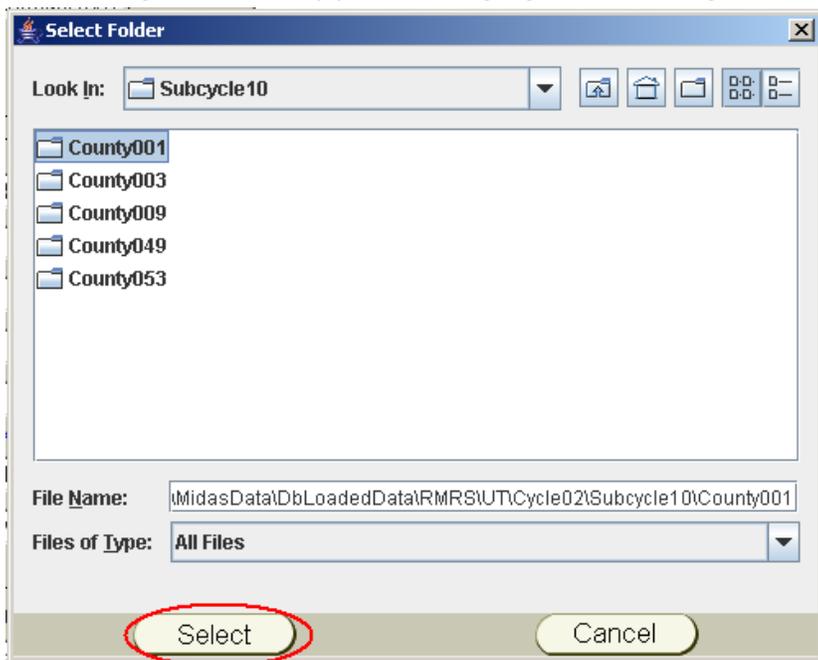

click on the **DbLoadedData** folder.

Then double-click on the **RMRS** folder.

Then double-click on your State folder. At this point, you need to know the **Cycle** and **Subcycle** of the plots you want to print. These numbers are part of your plot's file name. After the County and Plot numbers in the plot file name is the Cycle and then Subcycle number. For example, file name **UT.049.00149.02.10.P2.400.STDT1** is Utah, County 49, Plot 149, Cycle 02 and Subcycle 10. After double-clicking on your State, double-click on the Cycle folder you want then double-click on the Subcycle you want. Now you should have County folders displayed to choose from. Instead of double-clicking on the County you want, highlight it with a single click and then

click on the **Select** button. You

should now have one or more plots listed in the **Select Plots To Print** box of the **Print Plots** screen.
