

	This brochure lists common plant species found along the Big Bear Lake Pedal Path. Species occurrence varies across a rainfall gradient extending from Stanfield Cutoff (drier species) to the Big Bear Solar Observatory (more mesic species)
	To help locate plants, the path is divided into five sections on the map (A,B,C,D,&E). Please remain on the designated path to avoid damaging sensitive plant species.
	Please deposit any trash in waste receptacles at trailheads.
	For your safety, please watch out for bikes, runners, and strollers while looking for plants along the path
	For additional information please contact the Big Bear Discovery Center at (909)-866-3437
	Take pictures not flowers, PLEASE
